

Interactive comment on “Statistics of vertical velocities in supercooled cloud layers over Leipzig and Praia measured with Doppler lidar” by Johannes Bühl et al.

Anonymous Referee #1

Received and published: 2 July 2017

Dear Johannes Bühl et al.,

The suggestion of a major review to clarify the objectives and scope of the paper does sound reasonable to me, though I would think it will be quite a lot of work. Again, I would also still hope that the analysis and the interpretation of the physics behind the observed vertical velocity statistics would go deeper. A little more work there would provide the readers much better insight in this interesting topic and in general result in a much stronger manuscript.

Regards,
