9 **Figure S1.** Size distributions of polydisperse SOA samples produced from the flow tube reactor (a, b, c)
10 and atomizer (d) monitored with SMPS. Size distributions of monodisperse SOA obtained from
11 polydisperse sample (a) are also shown. The mass concentration of polydisperse SOA sample (c) was
12 multiplied by a factor of 20 to fit on this scale. The mass concentration of the 35 nm monodisperse
13 sample in the inset was multiplied by a factor of 40.

 2 **Figure S4.** Carbon oxidation state (OSc) vs. number of carbon atoms for assigned molecular formulas
 3 from the positive (+) and negative (-) ion mass spectra of low and high mass loading polydisperse SOA
 4 samples. Unique formulas in the low mass loading samples are shown in red. Unique formulas in the
 5 high mass loading samples are shown in blue. Formulas common to both samples are shown in black
