Received and published: 13 September 2017

The referees pointed out to us that a number of figures in the downloadable PDF file of our discussion paper were corrupted in a way that made some of them hard to understand (missing or incomplete labels and units). This was due to a technical problem during the processing of our submitted manuscript. This problem has been resolved and a corrected version of the discussion paper can be downloaded now. We apologise for not having examined the discussion paper in sufficient detail immediately after its publication.
