

Interactive comment on “Representation of solar tides in the stratosphere and lower mesosphere in state-of-the-art reanalyses and in satellite observations” by Takatoshi Sakazaki et al.

Anonymous Referee #1

Received and published: 4 October 2017

The authors performed a minor revision during the quick review process, and the article is in a very good shape now. The analysis of the solar tides in various data sets is very accurate and detailed. Thus, the article is a progress in this research area and of high interest for the readers of ACP. I only found a shortcoming in the figure caption 1 where the viewgraph g) is not mentioned.
