Atmospheric Chemistry and Physics Discussions

Interactive comment on "Quantification of sulfur deposition changes under sulfate geoengineering conditions" *by* Daniele Visioni et al.

B. Kravitz (Editor)

ben.kravitz@pnnl.gov

Received and published: 16 January 2018

The original reply from the authors contained an accusation that, in my view, unnecessarily called into question Dr. Visconti's professional standing and qualifications. After discussion with the authors, they agreed to post a reply in which those accusations are not included. As the handling editor, I consider the original accusation to be withdrawn, and I offer my apologies to Dr. Visconti for any displeasure that this communication may have caused.
