

Supplement of the manuscript “Ozone pollution around a coastal region of South China Sea: Interaction between marine and continental air”

Table S1. Gradient separation of C₁ – C₉ aldehyde and ketone derivatives.

Column	Nava-Pak C18 3.9 ×150 mm
Mobile phase	A: Water/Acetonitrile/Tetrahydrofuran 60/30/10
Gradient	B: Water/Acetonitrile 40/60
Flow rate	100% A for 2 min then a linear gradient from 100% A to 100% B in 18 min, 100% B for 4min
Injection volume	20μL
Detection	Absorbance at 360 nm

Table S2. Description of parameters used in WRF-CMAQ simulation.

Model	Parameters	Value
WRF(v3.7.1)	Microphysics	WRF Single-Moment 3-class scheme
	Longwave Radiation	RRTM scheme
	Shortwave Radiation	Dudhia scheme
	Surface Layer	MM5 similarity
	Land Surface	Noah Land Surface Model
	Planetary Boundary layer	Yonsei University scheme
	Cumulus Parameterization	Kain-Fritsch scheme
	Diffusion Option	Simple diffusion
	K Option	2d Deformation
	CMAQ(4.7.1)	ModDriver
ModInit		init_yamo
ModAdjc		// yamo option does not need denrate
ModCpl		gencoor
ModHadv		hyamo
ModVadv		vyamo
ModHdiff		multiscale
ModVdiff		acm2_inline
ModPhot		phot
ModChem		ebi_cb05cl_ae5
ModAero		aero5
ModCloud		cloud_acm_ae5
ModPa		pa
ModUtil		util
Mechanism		cb05cl_ae5_aq

Table S3. Index of agreement (IOA) between the simulated and observed meteorological parameters and air pollutants. IOA was calculated using the equation in Willmott (1982). Within the range of 0 – 1, higher IOA represents better agreement between the simulated and observed values.

	TC	WS
Temperature	0.81	0.84
Wind speed	0.56	0.54
Wind direction	0.60	0.51
Relative humidity	0.79	0.77
CO	0.88	0.87
NO _x	0.50	0.62
O ₃	0.81	0.81

Table S4. Summary of O₃ episode days at WS and TC during the sampling period.

No.	Description	Date	SLB	WS	O ₃ _MAX.	TC	O ₃ _MAX.
0	Typhoon-related (Trami)	0820	Y	near-O ₃ episode	92.6	near-O ₃ episode	87.1
1		0821	N	episode	173.0	episode	159.9
2	Typhoon-related (Usagi)	0920	N	-	61.4	episode	126.8
3		0921	N	episode	116.0	-	69.3
4	Typhoon-related (Wutip)	0927	Y	near-O ₃ episode	85.4	episode	102.4
5		0928	Y	episode	109.4	-	71.8
6	O ₃ episode event I	1001	N	near-O ₃ episode	89.8	episode	107.5
7		1002	Y	episode	126.9	near-O ₃ episode	91.7
8		1003	Y	episode	119.1	episode	121.2
9		1004	Y	episode	121.3	episode	119.7
10		1005	Y	episode	163.2	episode	143.1
11		1006	N	episode	151.9	episode	119.7
12		1007	N	episode	118.7	near-O ₃ episode	89.7
13		1008	N	episode	138.3	near-O ₃ episode	84.1
14	typhoon-related (Nari)	1011	Y	episode	130.8	episode	130.4
15		1012	Y	near-O ₃ episode	99.1	near-O ₃ episode	90.2
16	O ₃ episode event II	1019	Y	episode	155.0	episode	117.7
17		1020	Y	episode	122.1	episode	120.2
18		1021	Y	episode	124.0	episode	144.7
19		1022	N	episode	148.5	episode	104.4
20		1023	N	episode	152.3	episode	119.2
21		1024	N	episode	148.1	episode	116.1
22		1025	N	episode	135.8	near-O ₃ episode	89.1
23		1026	N	episode	105.3	episode	117.2
24		1027	N	episode	106.2	near-O ₃ episode	99.3
25		typhoon-related (Krosa)	1101	Y	near-O ₃ episode	83.2	episode
26	1102		N	near-O ₃ episode	95.6	-	35.1
27		1115	N	episode	109.8	-	66.2

Note: An O₃ episode day was defined when the peak one-hour averaged O₃ mixing ratio exceeded 100 ppbv (Level II of China National Ambient Air Quality Standard). A near-O₃ episode days was defined when the peak hourly average O₃ mixing ratio was lower than 100 ppbv but higher than 80 ppbv (Level I of China National Ambient Air Quality Standard).

Table S5. Ranking of the top 10 NMHC species observed at TC and WS during O₃ episodes and non- episodes.

<i>Rank</i>	TC		WS	
	<i>Episode</i>	<i>Non-episode</i>	<i>Episode</i>	<i>Non-episode</i>
1	Ethane	Ethane	Ethane	Ethane
2	Acetylene	Propane	Acetylene	Acetylene
3	Propane	<i>i</i> -Butane	Toluene	Propane
4	<i>i</i> -Butane	Toluene	<i>i</i> -Butane	<i>i</i> -Butane
5	Toluene	<i>n</i> -Hexane	Propane	Toluene
6	<i>n</i> -Butane	<i>n</i> -Butane	<i>n</i> -Butane	Ethene
7	Ethene	Acetylene	<i>n</i> -Hexane	<i>i</i> -Pentane
8	<i>i</i> -Pentane	Ethene	<i>i</i> -Pentane	<i>n</i> -Butane
9	<i>n</i> -Hexane	<i>i</i> -Pentane	Ethene	<i>n</i> -Hexane
10	Benzene	Benzene	Benzene	Benzene

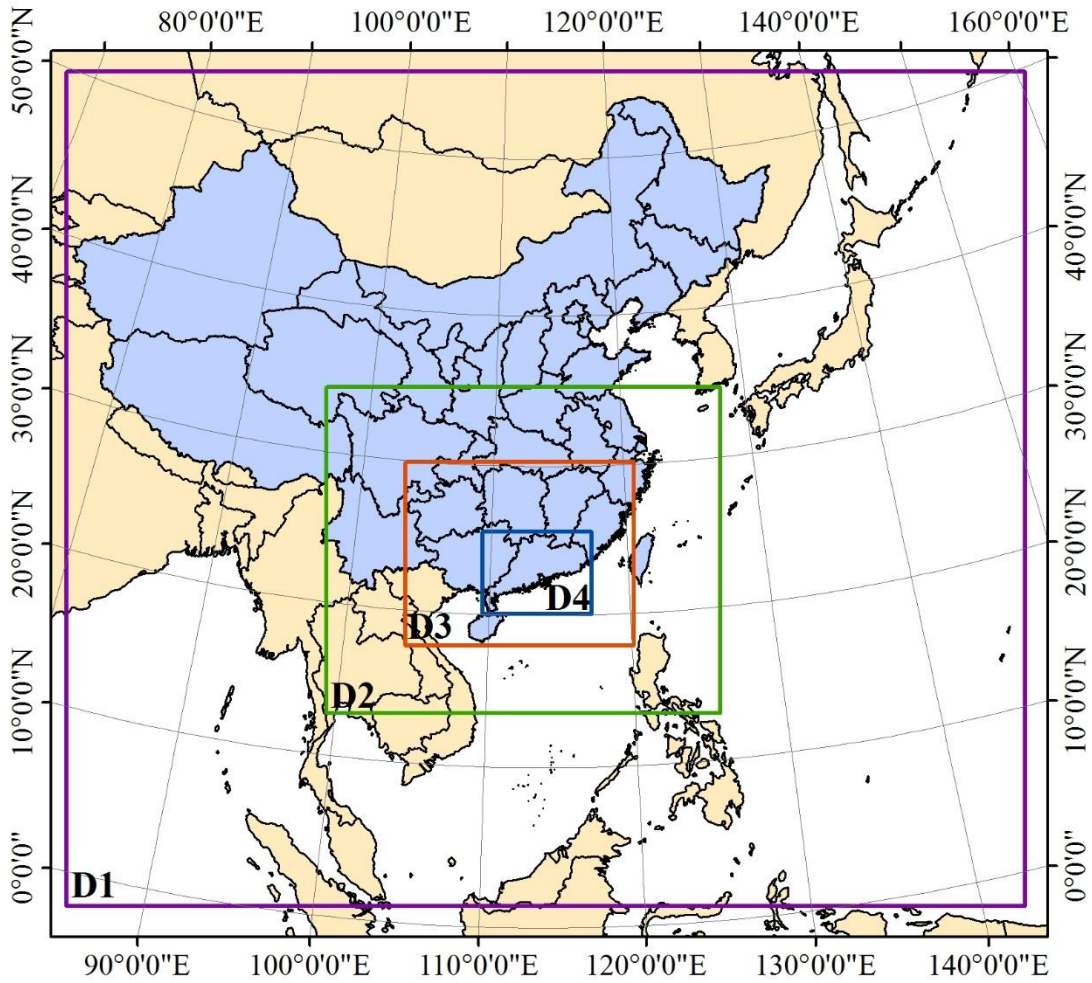

Figure S1 Nesting domain settings of the WRF model. D1, D2, D3 and D4 inside the figure denote domain 1, 2, 3 and 4, respectively. The outermost domain (D1) covers the entire China and East Asia with the resolution of $81 \text{ km} \times 81 \text{ km}$ and 89×78 grids. D2 covers South China with the resolution of $27 \text{ km} \times 27 \text{ km}$ and 109×91 grids. D3 covers Guangdong province and the surrounding areas with the resolution of $9 \text{ km} \times 9 \text{ km}$ and 187×151 grids. The innermost domain (D4) covers Pearl River Delta region with the resolution of $3 \text{ km} \times 3 \text{ km}$ and 186×150 grids.

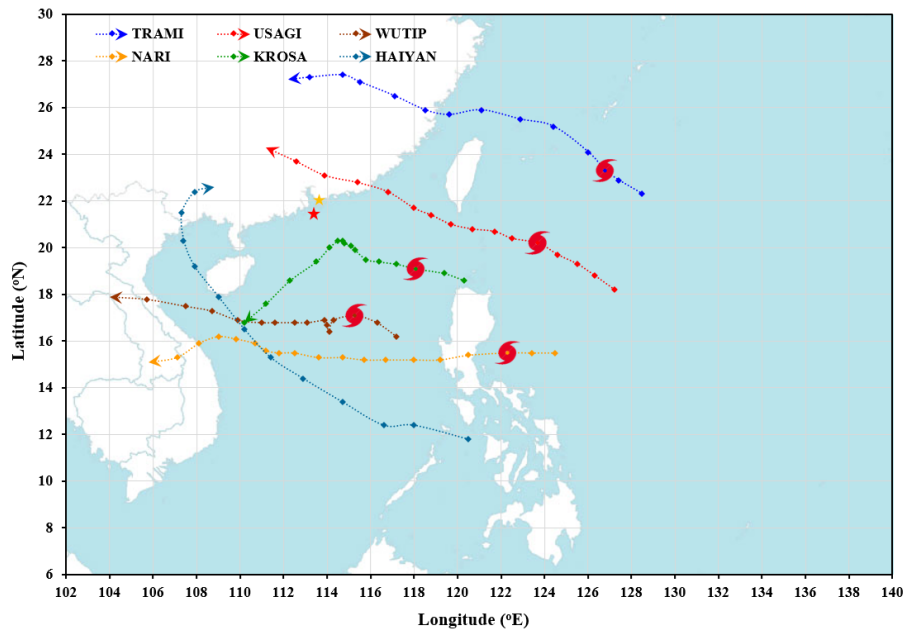

Figure S2. Track of typhoons during the sampling period. The typhoon labels mark the positions when O₃ episodes occur in Hong Kong. The dots represent intermediate 6-hourly positions.

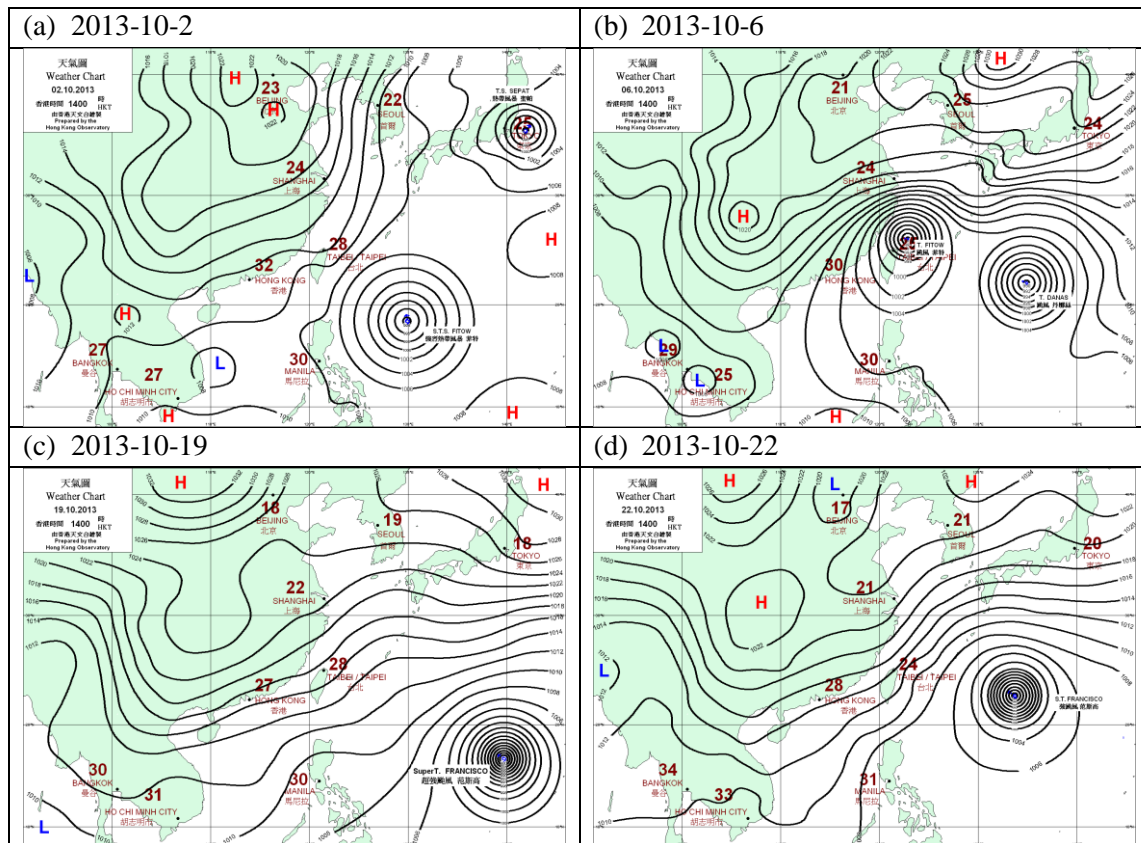

Figure S3. Selected examples of weather charts at 6 am during Continental High Pressure in October 2013. (a) & (c) Continental high pressure systems formed far away from the coastal areas and caused SLBs related O₃ episodes; (b) & (d) Continental high pressure systems approaching to the coastal areas and caused O₃ episodes not related to SLBs; The maps are courtesy provided by Hong Kong Observatory.

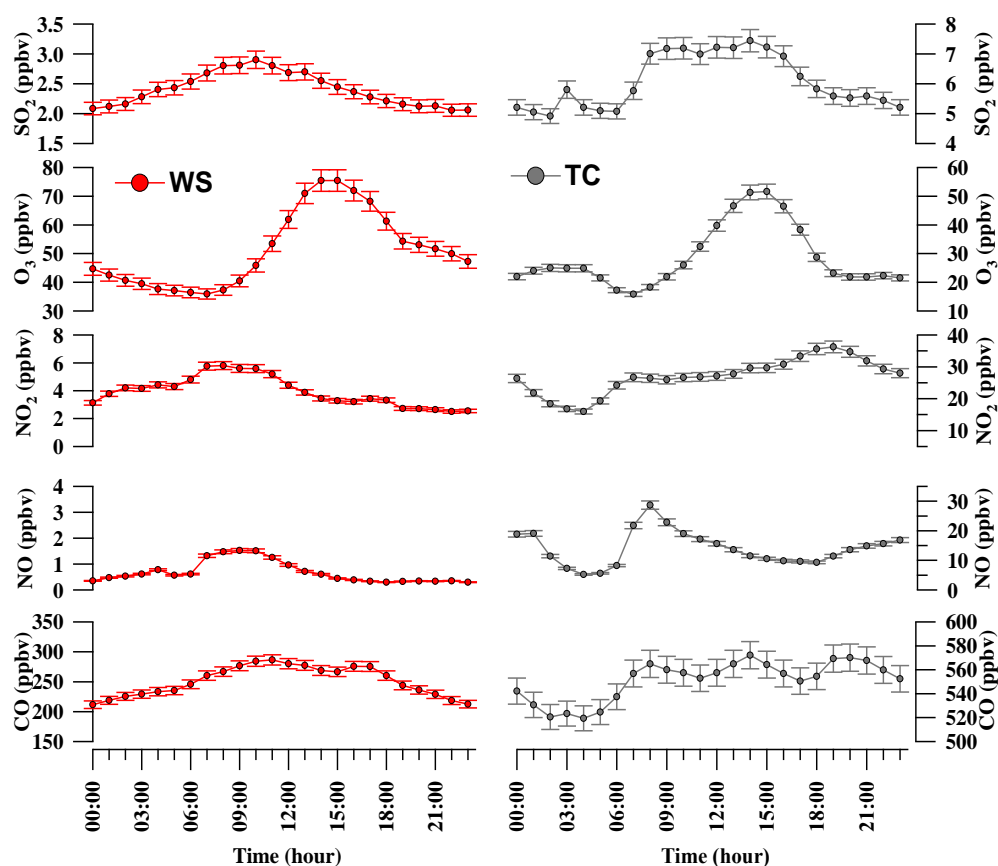

Figure S4. Diurnal variations of trace gases measured at WS and TC.

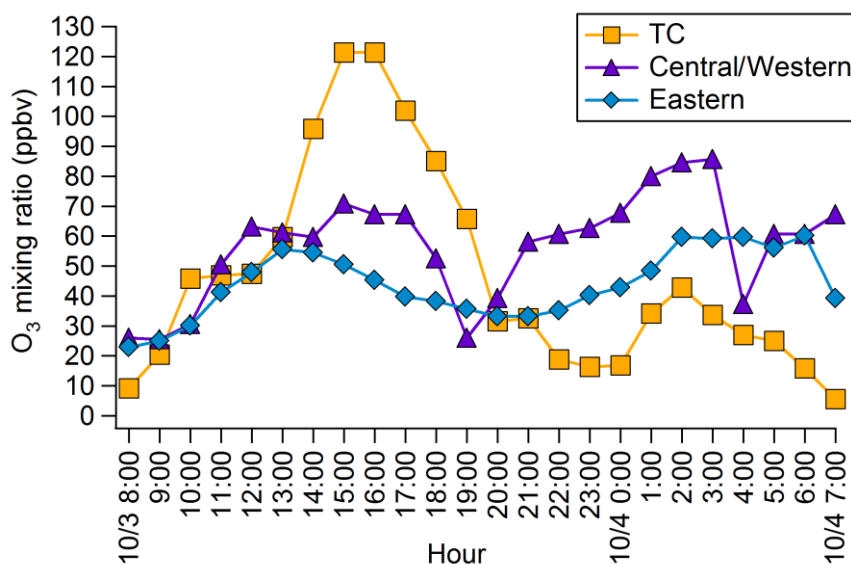

Figure S5. Hourly average O_3 observed at TC, Central/Western and Eastern from 08:00 on 3 October to 07:00 on 4 October. The three sites were located in southern Hong Kong, which were all non-roadside sites. Detailed information can be found on the website of HKEPD (<http://www.aqhi.gov.hk/en/monitoring-network/air-quality-monitoring-stations9c57.html?stationid=81>).
