20 **Chemicals**

21 Guaiacol (Sigma-Aldrich, >99%), sodium chloride (Sinopharm Chemical
22 Reagent Co., Ltd., >99.8%), and ammonium sulfate (Sinopharm Chemical Reagent
23 Co., Ltd., >99%) were used in the experiments as received. NO (963 ppm) and SO₂
24 (3000 ppm) were purchased from Beijing Huayuan Gas Chemical Industry Co., Ltd.

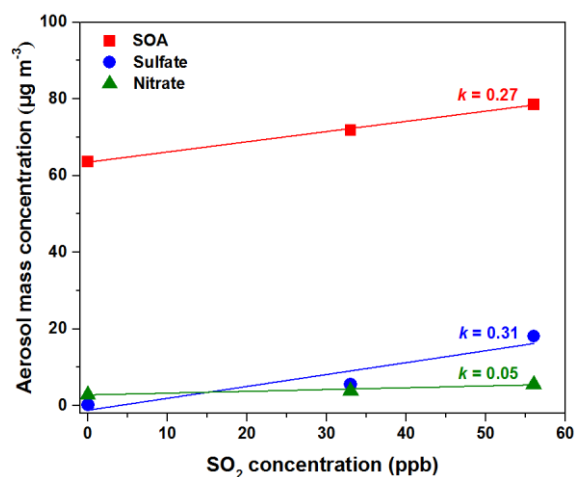

27

28 **Figure S2.** SOA mass concentration (M_0) vs. the consumed guaiacol concentration

29 ($\Delta[\text{guaiacol}]$). Each data point represents a separate experiment.

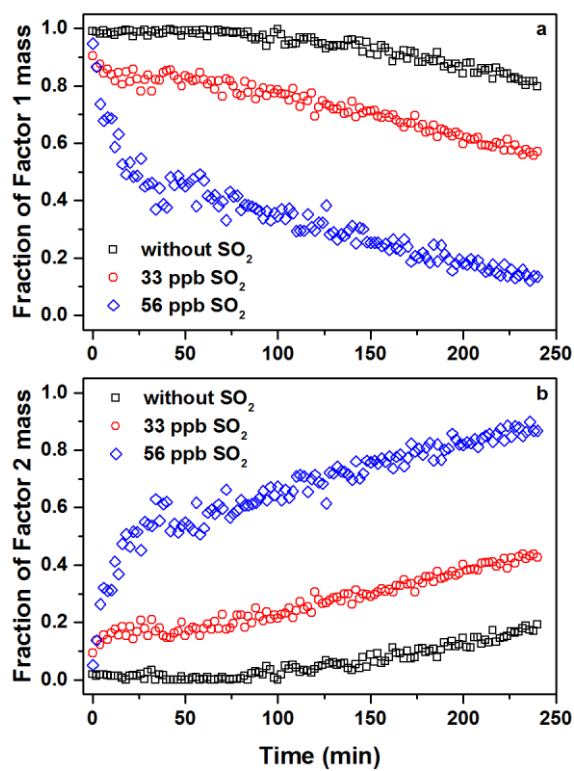

30

31 **Figure S3.** Foramtion of SOA, sulfate, and nitrate as a function of SO_2 concentration

32 for guaiacol photooxidation. The k values are the slopes of the fitted lines for each

33 species.

34

35 **Figure S4.** Time-dependent curves of Factor 1 (a) and Factor 2 (b) at three different

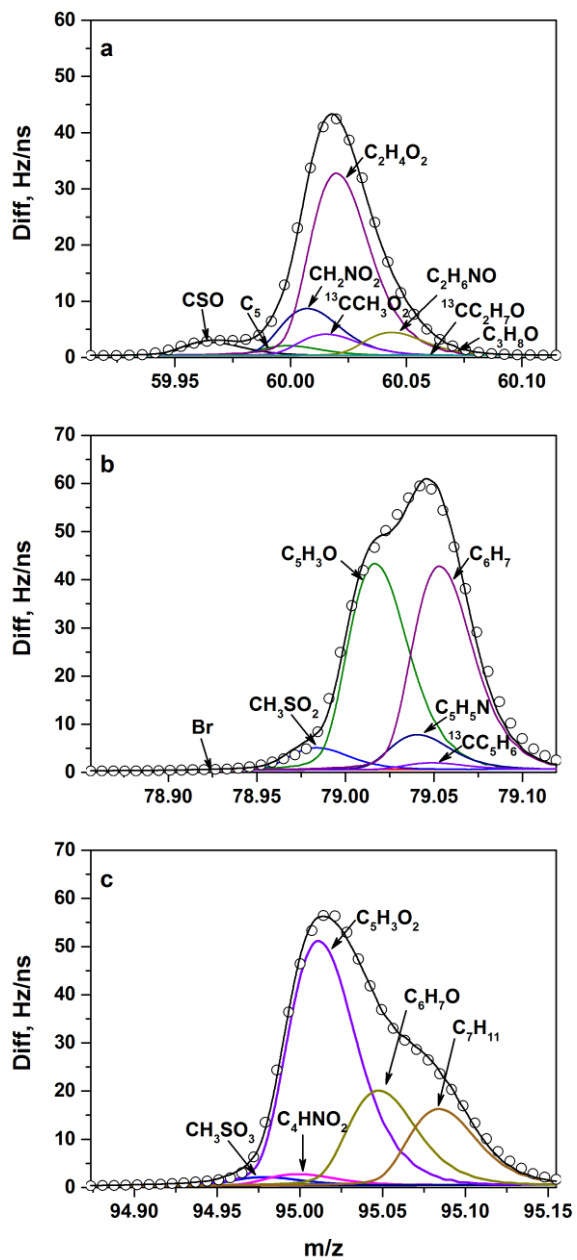

36 SO₂ concentrations.

37

38 **Figure S5.** Differences among the normalized mass spectra of SOA formed at

39 different SO₂ concentrations (a: 33 ppb SO₂ – no SO₂; b: 56 ppb SO₂ – 33 ppb SO₂).

40

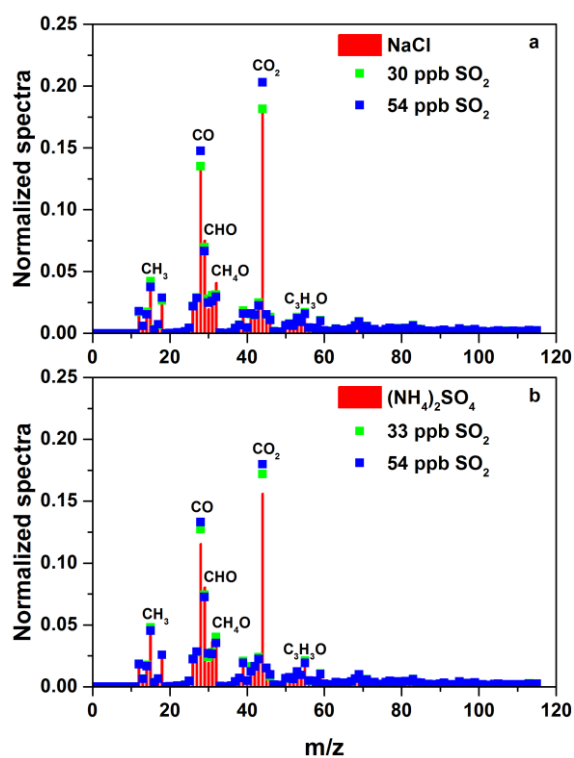

41 **Figure S6.** Fitted peaks of average W-mode mass spectrum of methyl sulfate obtained

42 at 56 ppb SO_2 without seed particles.

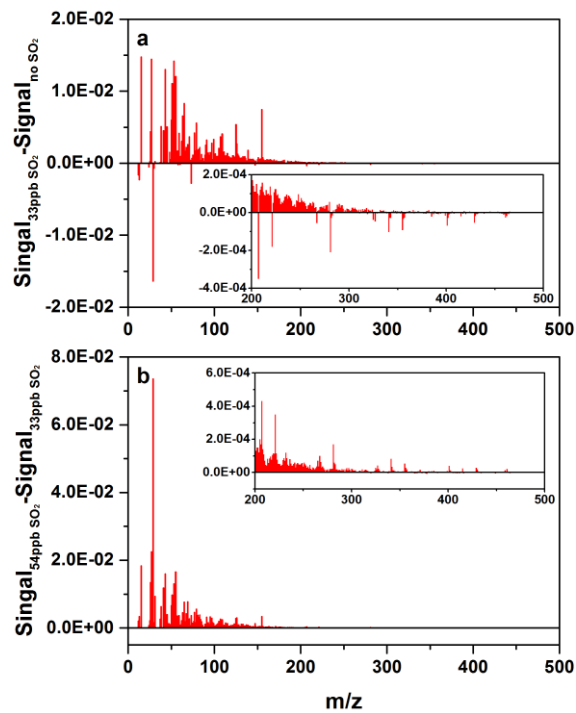

43

44 **Figure S7.** Difference between the normalized mass spectra of SOA formed with
 45 different seeds (NaCl seeded SOA – $(\text{NH}_4)_2\text{SO}_4$ seeded SOA).

46

47 **Figure S8.** Mass spectra of SOA with NaCl (a) and $(\text{NH}_4)_2\text{SO}_4$ (b) as seed particles
 48 obtained by HR-ToF-AMS at different SO_2 concentration (red bars: without SO_2 ; olive
 49 markers: 30 ppb SO_2 for a and 33 ppb SO_2 for b; blue markers: 54 ppb SO_2).

50

51 **Figure S9.** Differences among the normalized mass spectra of SOA formed at
 52 different SO₂ concentrations with (NH₄)₂SO₄ seed particles (a: 33 ppb SO₂ – no SO₂;
 53 b: 54 ppb SO₂ – 33 ppb SO₂).

54

55 **Figure S10.** Differences among the normalized mass spectra of SOA formed at
 56 different SO₂ concentrations with NaCl seed particles (a: 30 ppb SO₂ – no SO₂; b: 54
 57 ppb SO₂ – 30 ppb SO₂).
