

Fig. S1

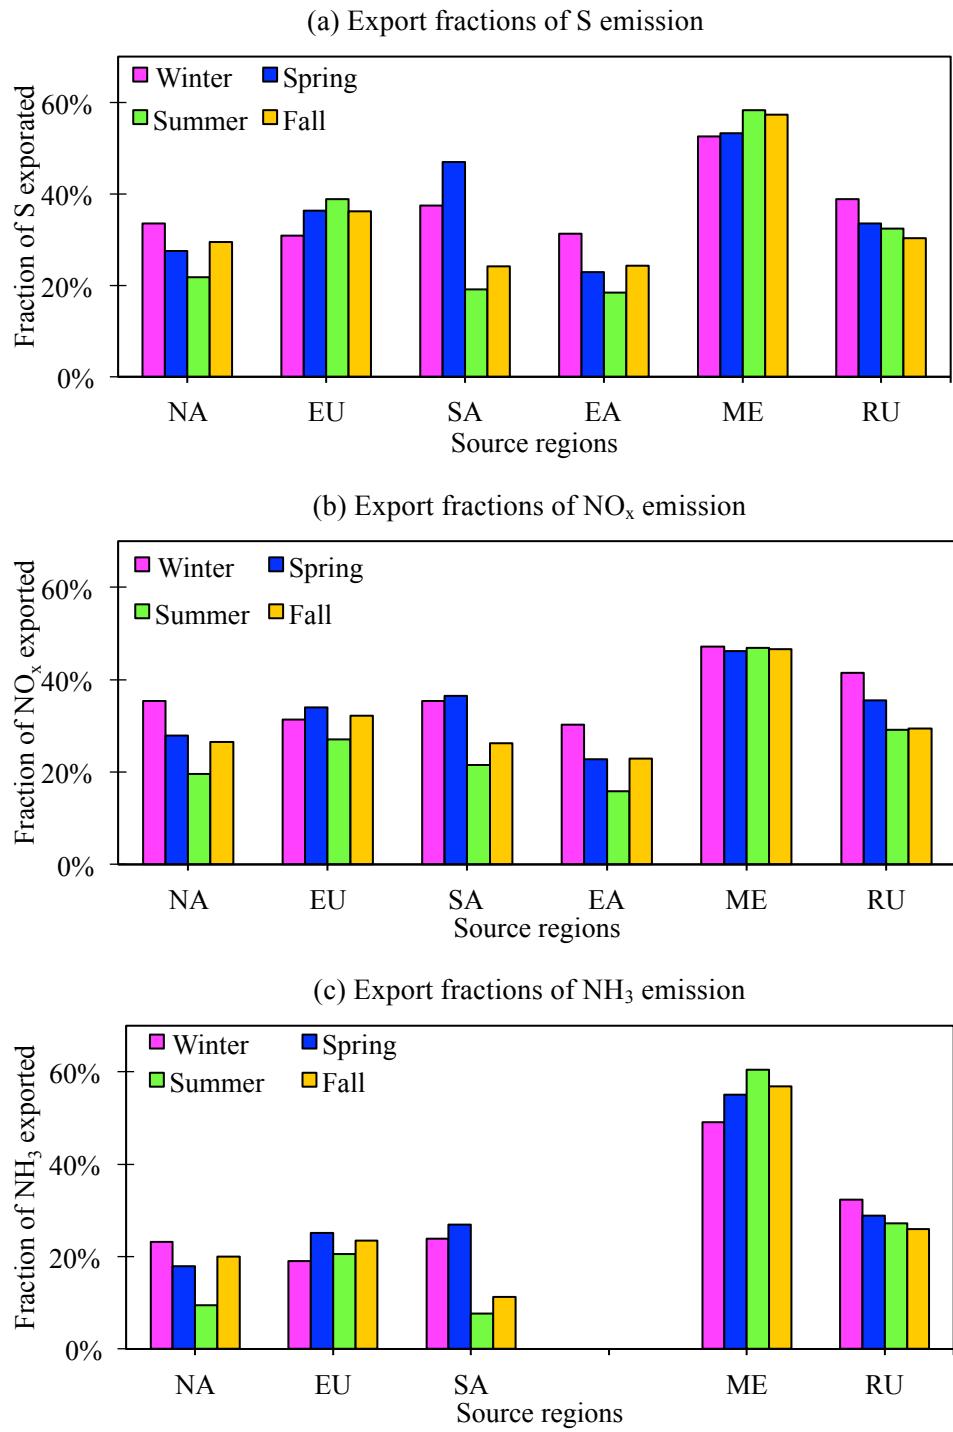

Fig. S1 Export fractions of S, NO<sub>x</sub> and NH<sub>3</sub> emissions from source region in four seasons.

Fig. S2

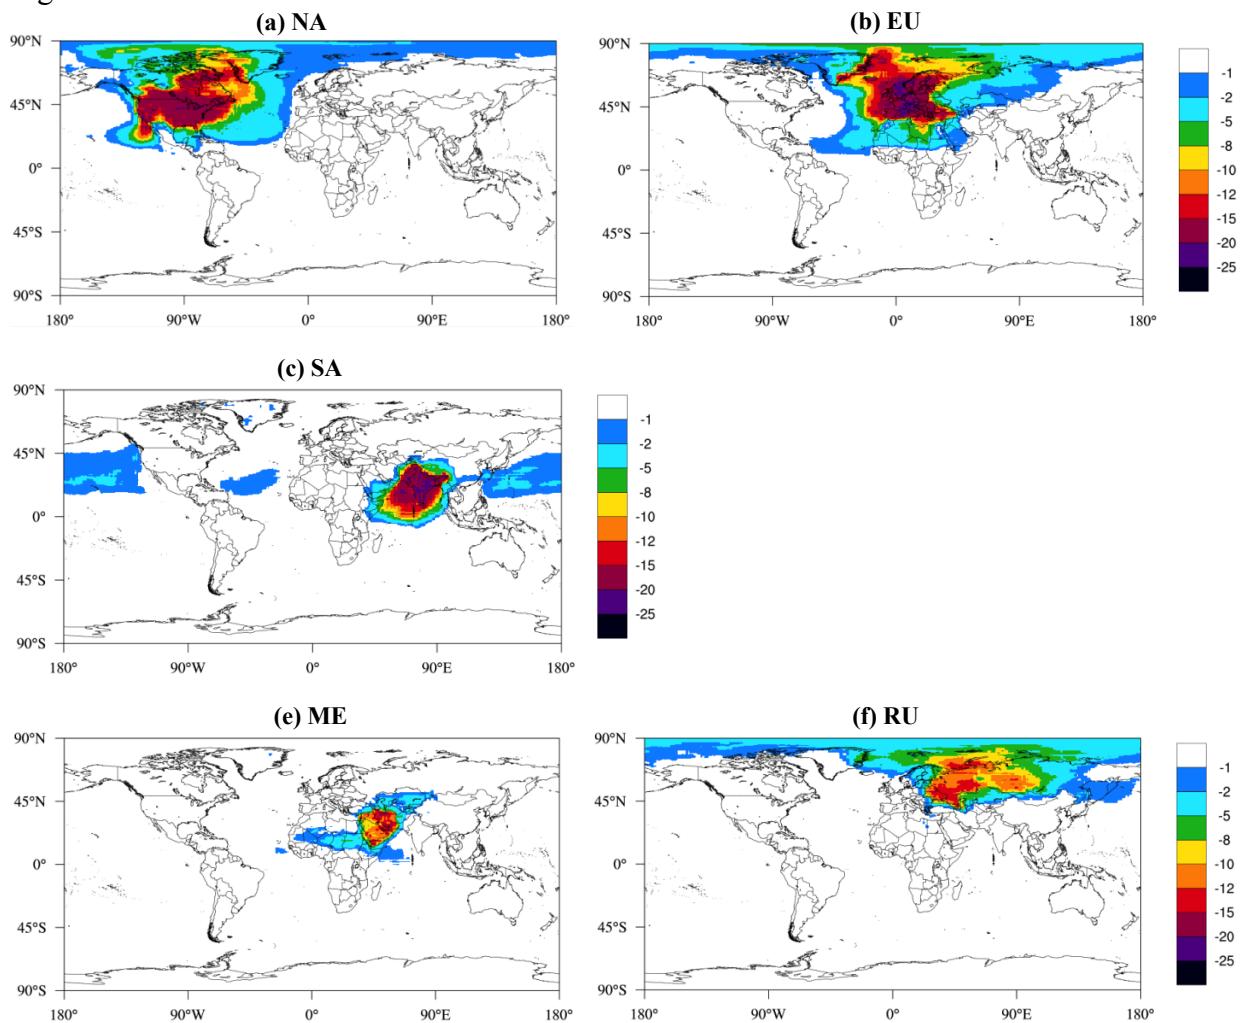

Fig. S2 The response of  $\text{NH}_x$  deposition to 20% emission reduction in source regions. The values are the percentage changes (%) in deposition calculated as (changes in deposition with 20% emission reduction) / (base case deposition)  $\times 100\%$ . The unit is %.

Fig. S3

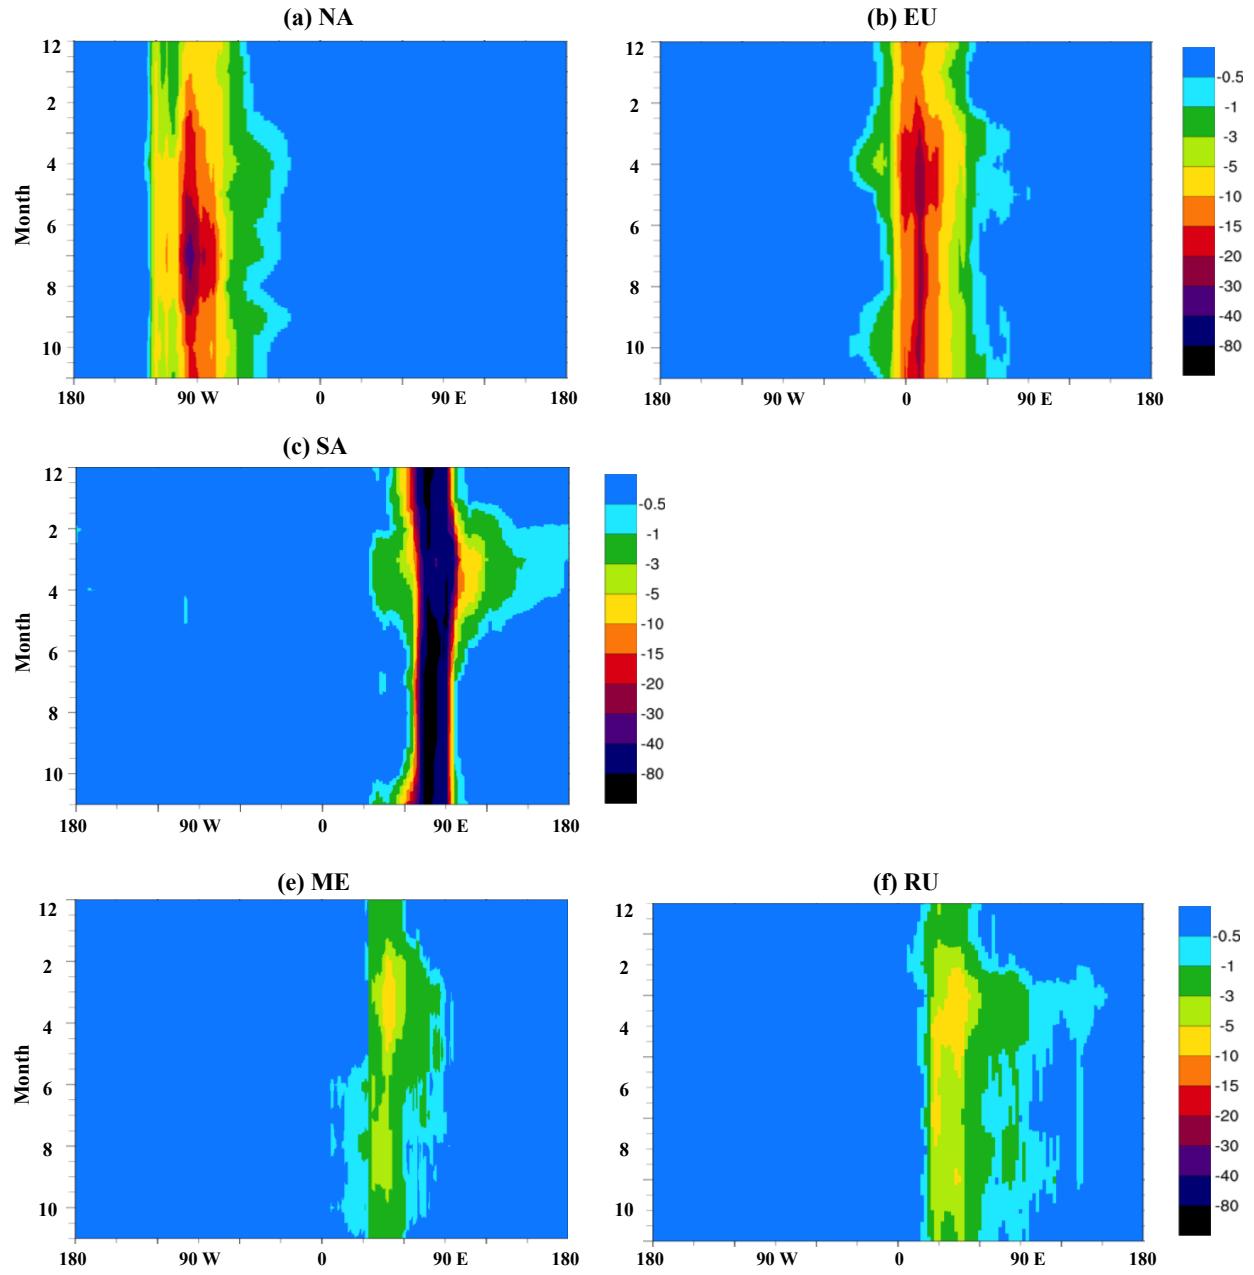

Fig. S3 The monthly changes of  $\text{NH}_x$  deposition with 20% emission reduction in source regions. The values are meridional total values versus time with a west-east resolution of 0.1 degree. The unit is  $\times 10^4 \text{ kg(N) month}^{-1}$ . The negative values indicate decline in deposition.
