

Interactive comment on “Atmospheric observations and emission estimates of ozone-depleting chlorocarbons from India” by Daniel Say et al.

Anonymous Referee #1

Received and published: 4 April 2019

After reading the comment of reviewer #2, I have to admit that my reviewer #2 made a really good comment. He/she expressed my underlying feeling in a very appropriate manner. The separation into 2 papers does not make sense. In addition, as already mentioned by reviewer #2 some sources could be identical, such as HCFC-22 and CHCl₃. Therefore, I would also recommend that the 2 papers should be combined in order to create an additional value for the reader.
