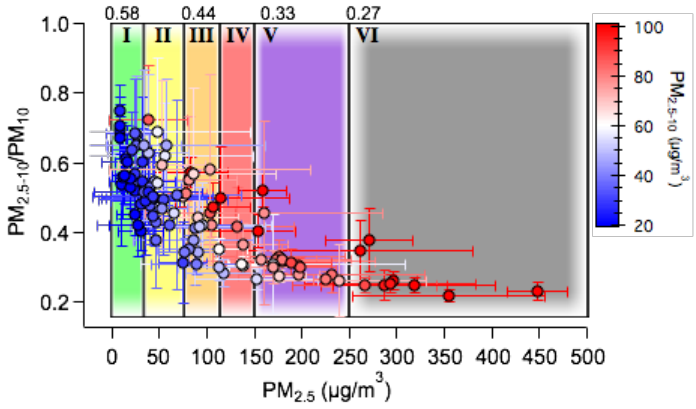
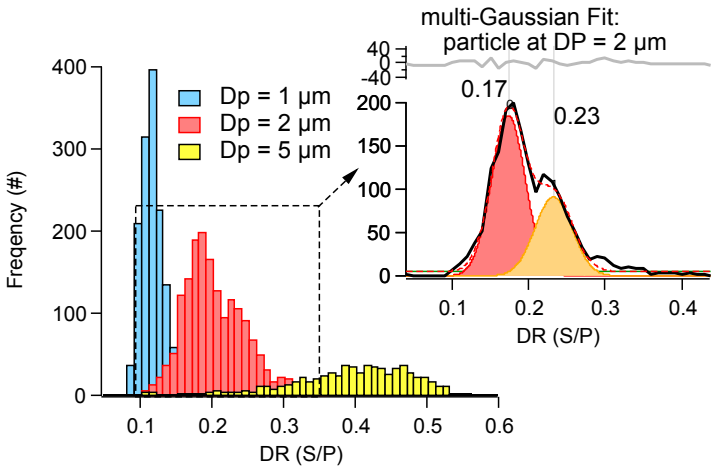
Supplementary Figures



SF.1 The relationship between $PM_{2.5\text{-}10}/PM_{10}$ as a function of mass concentration of $PM_{2.5}$. Colored-block behind the symbols indicate the air quality level classifications. Color filled circles indicated the daily averaged mass concentration of $PM_{2.5}$.



SF.2 Scatter plot of mass fraction of particle in coarse mode (PM2.5-10) in PM10 as a function of mass concentration of PM2.5. The shaded colour represent the air quality level during observation period.
