

Figure S1: Diurnal variation of NPF event characteristics (a) Condensational Sink and (b) Coagulation loss during December 12, 2016.

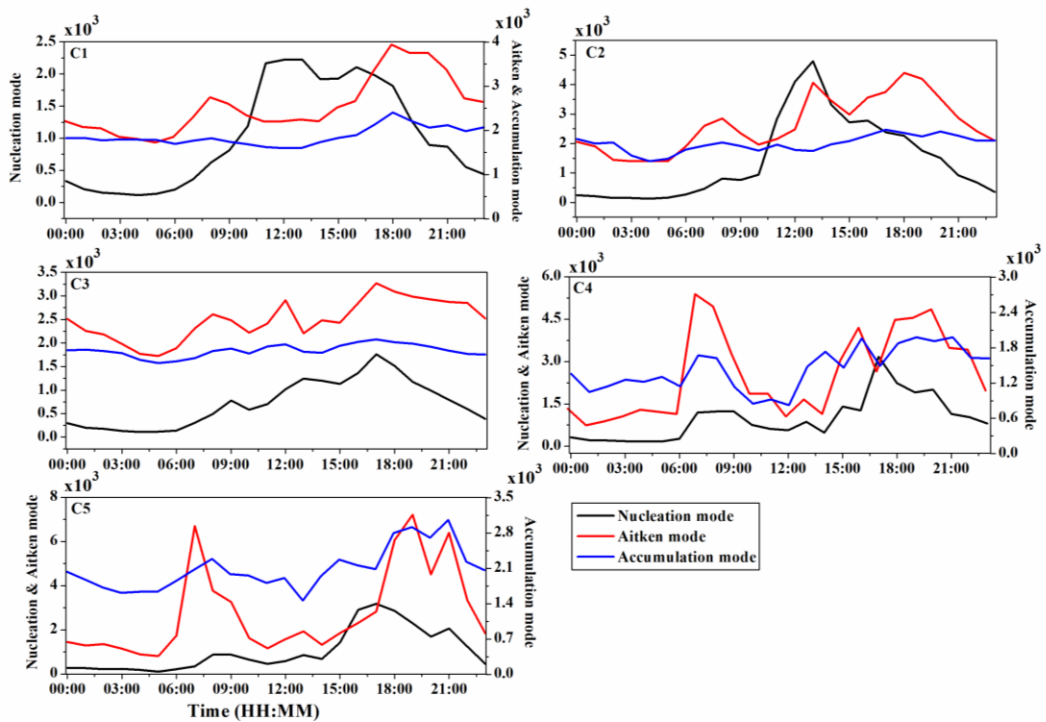

Figure S2: Diurnal Variation of particle number concentration in three modes - nucleation, aitenk and accumulation mode for each cluster.

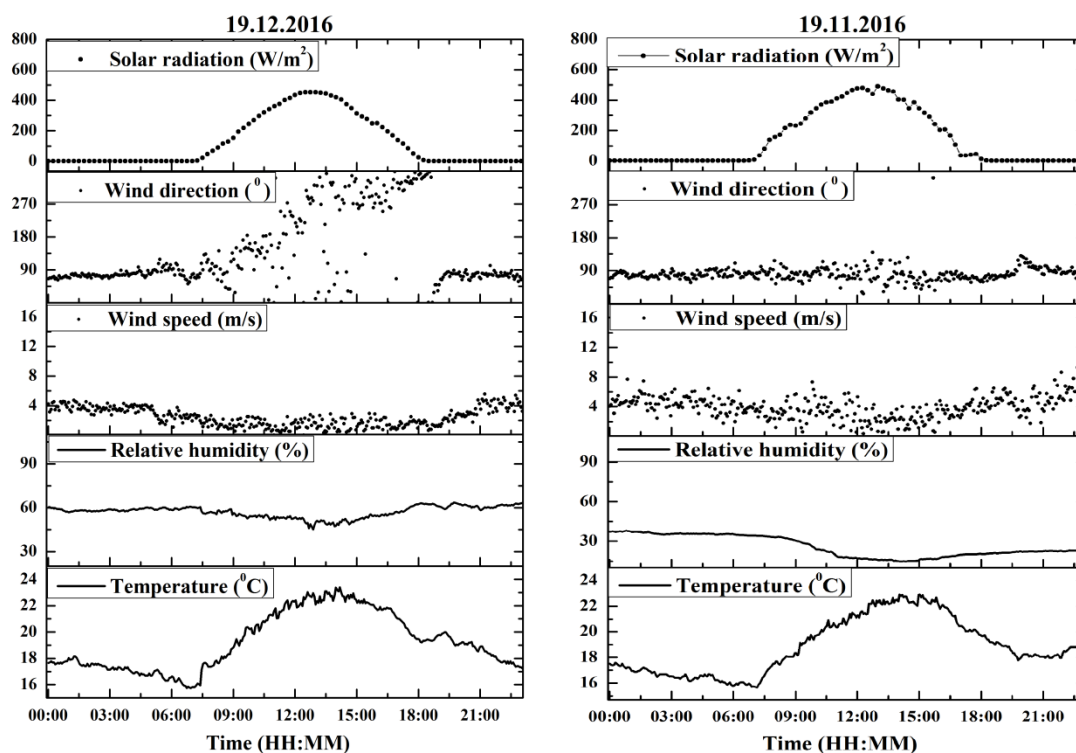

Figure S3: Diurnal variation of meteorological conditions - Solar radiation (SR), Wind direction (WD), Wind speed (WS), Relative Humidity (RH) and Temperature (T) on a non-NPF day - 19th December 2016 (left panel) and a weak-NPF day - 19th November 2016 (right panel)

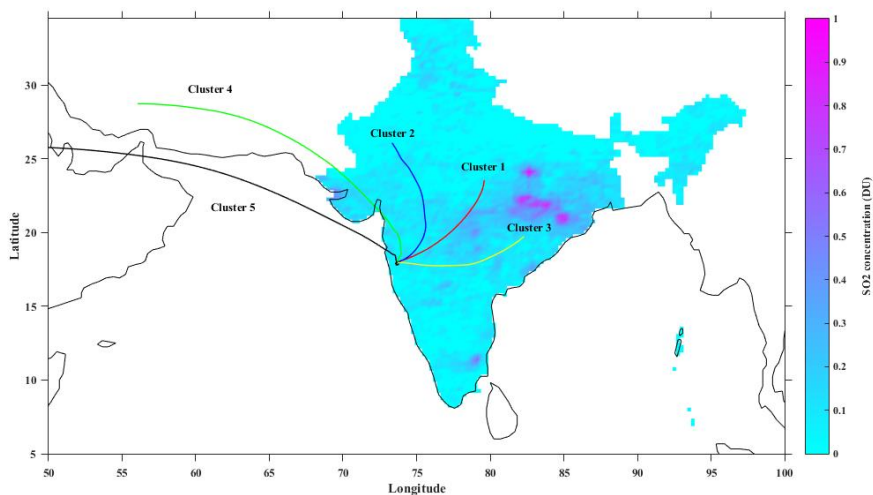

Figure S4: The spatial distribution ($0.25 \text{ deg} \times 0.25 \text{ deg}$) of SO_2 emissions (vertical column density) over the Indian region from November 2016 to February 2017. The data was extracted from the OMI satellite (<http://giovanni.sci.gsfc.nasa.gov/>). Clusters C1-C4 (from Figure 4) are also depicted in the figure.
