

Interactive comment on “Significant decline of mesospheric water vapor at the NDACC site Bern in the period 2007 to 2018” by Martin Lainer et al.

Anonymous Referee #2

Received and published: 9 October 2018

The paper is interesting, important, well written and fulfills the requirements for ACP. Referee: 3 has given valuable comments that I support. I would also like the authors to add a km altitude scale to the right of figures 2 and 4.

Interactive comment on Atmos. Chem. Phys. Discuss., <https://doi.org/10.5194/acp-2018-711>, 2018.
