## Interactive comment on "Direct evidence for secondary ice formation at around –15 °C in mixed-phase clouds" by C. Mignani et al.

## **Anonymous Referee #1**

Received and published: 28 August 2018

I have included my comments in the attached PDF. I appreciate that the authors are using a new means of estimating the secondary ice enhancement factor but have difficulty supporting publication given the limited quantity of data employed.

Please also note the supplement to this comment: https://www.atmos-chem-phys-discuss.net/acp-2018-829/acp-2018-829-RC1-supplement.pdf
