Interactive comment on "Long-term measurements of ground-level ozone in Windsor, Canada – Part I. temporal variations and trends" *by* Xiaohong Xu et al.

Anonymous Referee #1

The authors applied the method presented by Akimoto et al. (2015) to the analysis of long-term trend of O3 and NOx in the city of Windsor. Although the originality of the idea is not very high, the analysis is the most comprehensive of this kind of research and the paper provides a useful view of the impact of the emission control of NOx on O3 concentration. The presentation quality of the scientific results is good, and I recommend the manuscript is published in the present form.
