

Review for ACP-2018-860

The manuscript investigates the effectiveness of the emission control to the pollutant concentrations during the 2nd World Internet Conference from December 16 to December 18, 2015. The authors have addressed reviewers' points and make recommended changes in the manuscripts. The manuscript is well-organized. I suggest this manuscript goes through minor revision with the following comments.

Minor points:

1. How do you conduct the emission inventory to account for the controlled measures?
2. What is the difference between your findings and previous studies?
3. Line 106: "big different effects" to "significantly different effects"
4. Line 423: "The chemistry also changes ...", do you mean the "chemical composition of PM2.5 also changes.." or "chemical processes associated PM2.5 production".
