This paper shows the long-term evolution (2006~2015) of anthropogenic emissions in Guangdong Province of China, to reveal the causes of source-contribution changes during this periods. The conclusions obtained in this paper are of great significance for the deep understanding of regional pollution emission characteristics, and have important guiding for co-control strategies on regional atmospheric pollution. The datasets produced by the article are conducive to the in-depth study of scientific issues in related fields. Therefore ij Nthis paper is strongly recommended for publication.
