This short comment is to request that the authors "+0i" to the refractive indices reported in the abstract. For example, $1.50+0i$ instead of 1.50. I would also suggest adding a note about the high SSA of 0.99 measured at their sampling site to the abstract. After reading the abstract, I was left wondering about the strange formatting; after reading Section 2.6 of the manuscript I found a satisfying explanation.
