Interactive comment on "Enhanced sulfate formation through SO_2+NO_2 heterogeneous reactions during heavy winter haze in the Yangtze River Delta region, China" *by* Ling Huang et al.

Anonymous Referee #1

I just found that I was reviewing and referring to an older version of the supplement that I downloaded during the access review, which does not include Figures S7 and S8. These two figures are included in the current version online. So my original comments about the two missing figures on spatial patterns should be ignored. My apologies about any confusion.
