

**Table S1: Chemistry and Physics options used in WRF-chem**

Physics options		
Microphysics	Thompson	(Thompson et al., 2008)
Longwave/Shortwave radiation	RRTMG	(Iacono et al., 2008)
Land Surface Physics	NOAH	
Planetary Boundary layer	MYNN 2.5	(Nakanishi and Niino, 2006)
Cumulus parameterizations	GRELL 3D	(Grell, 2002)
Chemistry Options		
Gas-phase chemistry	MOZART	(Emmons et al., 2010)
Aerosols	MOSAIC	(Zaveri et al., 2008)
Anthropogenic Emissions	EDGAR-HTAP2	(Janssens-Maenhout et al., 2015) <sup>2</sup>
Biogenic Emissions	MEGAN	(Guenther et al., 2006)

**Figure S1: Daily average soil moisture for peat across the study area (95-120°E and 10°S-10°N) for 2015.**

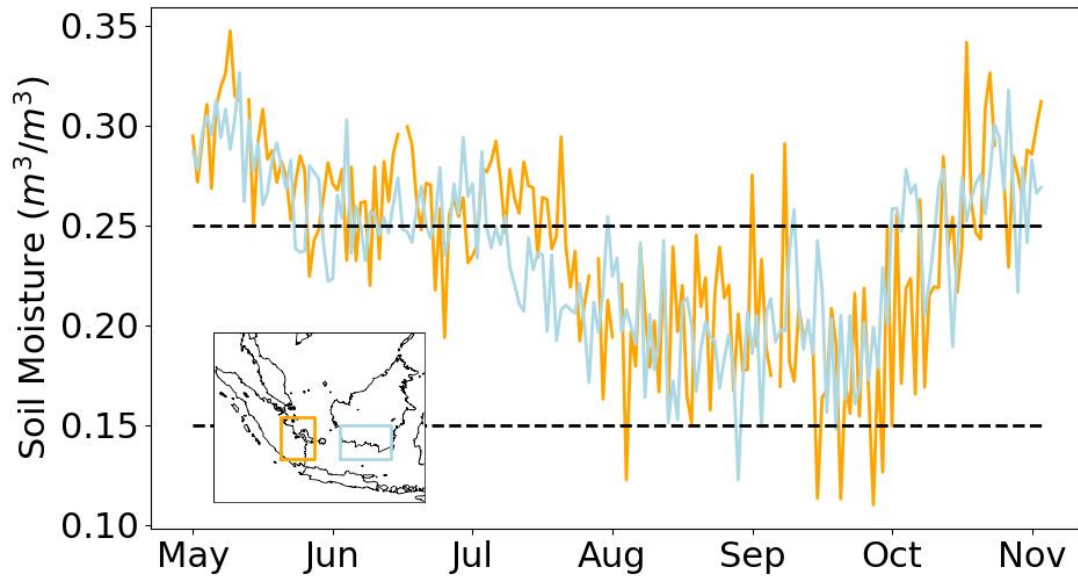

Figure S2: Soil moisture over high fire peatland regions (shown inset). The upper and lower soil moisture limits used to calculate depth are shown by the dotted lines.

**Equation S1**

Fractional bias, FB, is defined by

$$FB = \frac{1}{N} \sum \frac{(M_i - O_i)}{(M_i + O_i)/2}$$

Where N is the number of pairs of modelled (M) and observed (O) values.

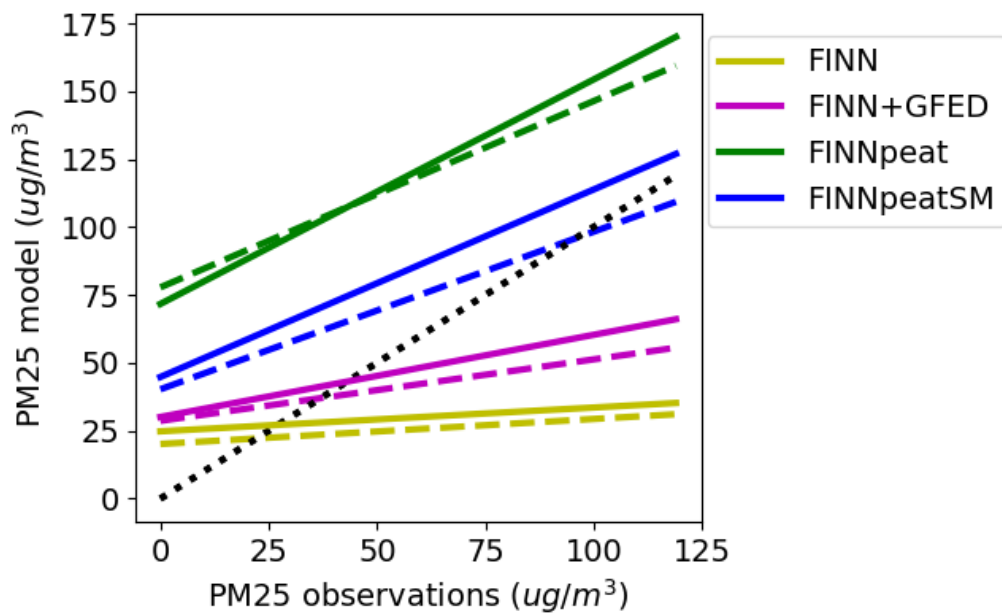

Figure S3: 24 hour mean PM<sub>2.5</sub> from observations and model simulations with different fire emissions datasets and injection options. Solid lines are simulations with surface injections, dashed lines and simulations with boundary layer injection. 1:1 relationship shown by black dotted line.

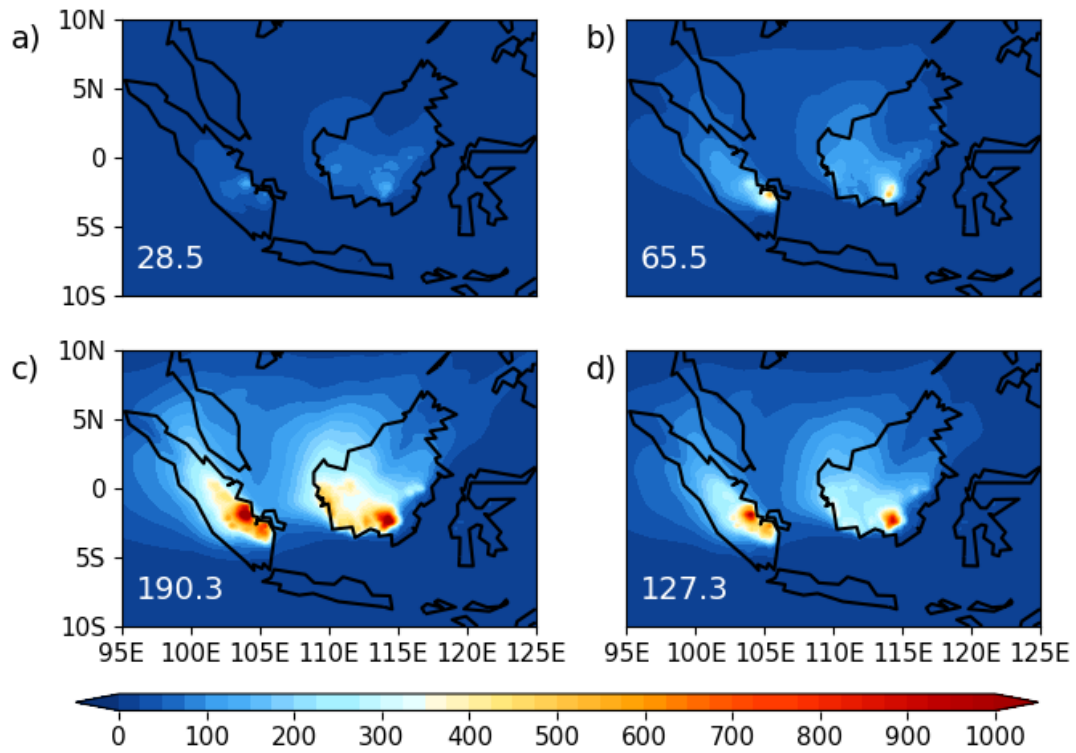

Figure S4: Average PM<sub>1</sub> and OA in Singapore for October 10<sup>th</sup>-31<sup>st</sup>, for observations and WRF-chem runs with the boundary layer injection option and different fire emissions datasets. The percentage contribution of OA to PM<sub>1</sub> is shown on each bar. PM<sub>1</sub> observations are a sum of Cl, NH<sub>4</sub>, NO<sub>3</sub>, SO<sub>4</sub> and OA. PM<sub>1</sub> from the model is NH<sub>4</sub>, NO<sub>3</sub>, SO and OA.

**Figure S5: Mean model surface PM<sub>2.5</sub> concentration (µg m<sup>-3</sup>) from fires for Sep-Oct 2015 with the boundary layer injection and (a) FINN emissions, (b) FINN+GFEDpeat, (c) FINNpeat and (d) FINNpeatSM. On each plot is the surface PM<sub>2.5</sub> from fires averaged over Sumatra and Borneo for September and October**

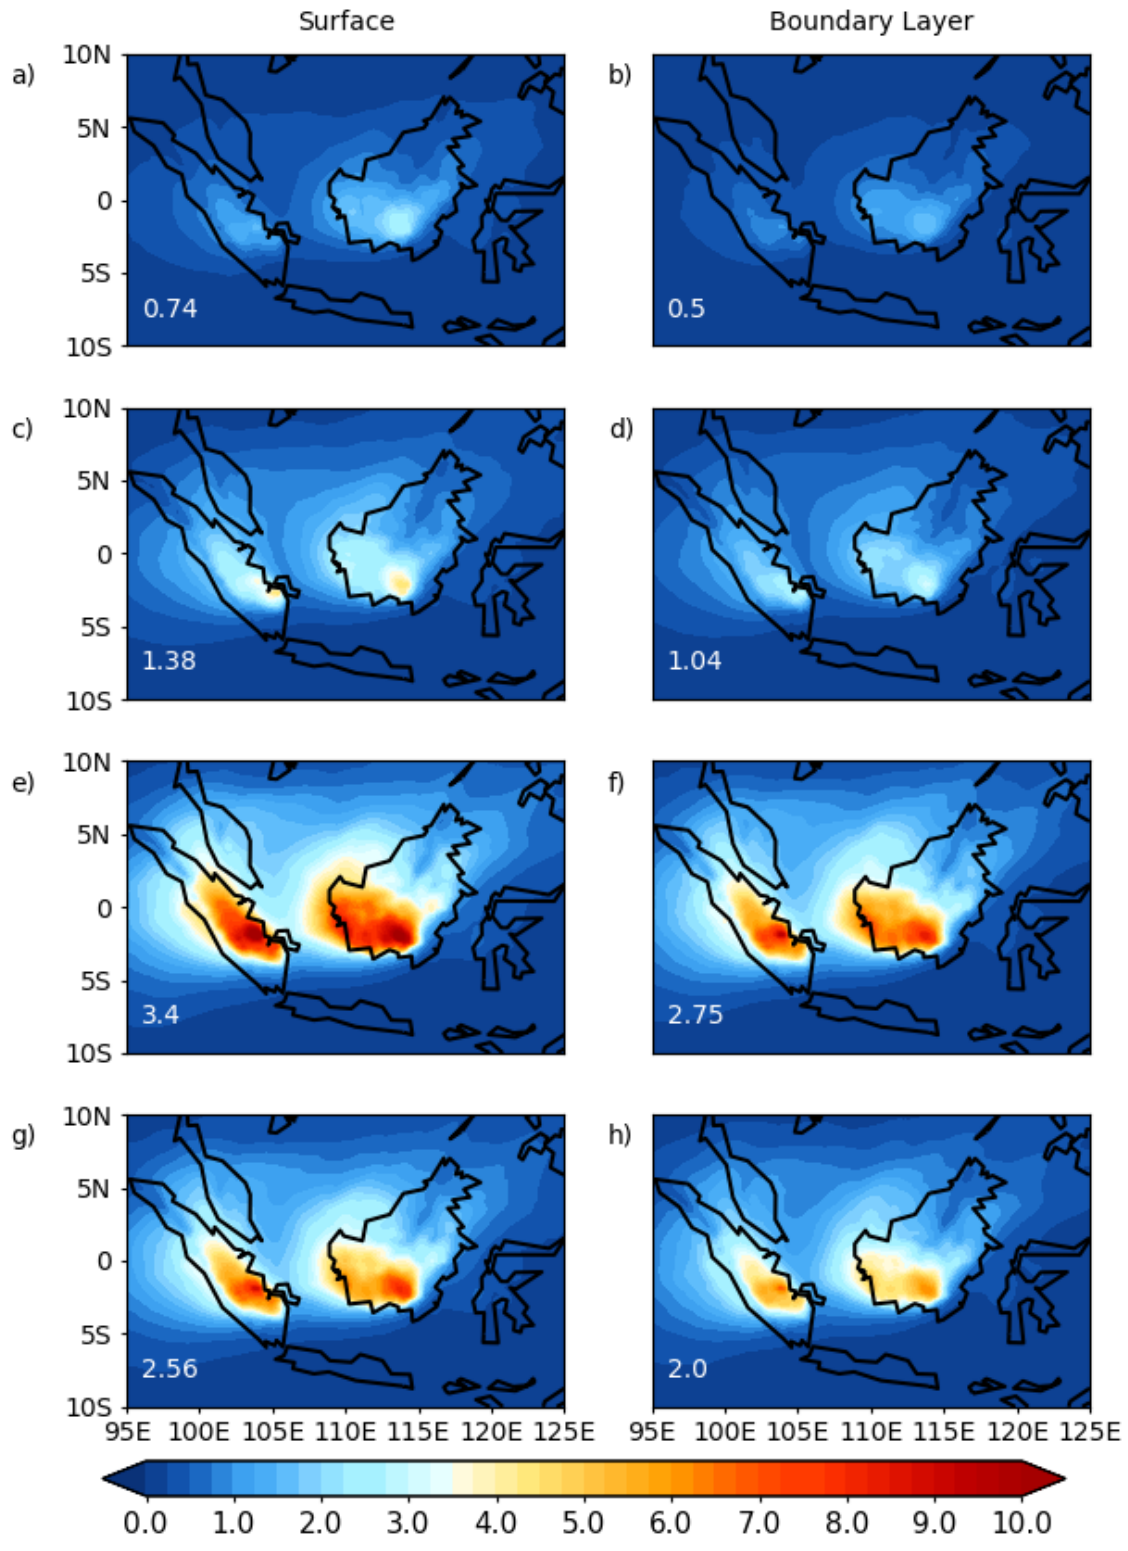

Figure S6: Mean AOD from fires for Sep-Oct 2015 with the surface (a,c,e,g) and boundary layer injection (b,d,f,h) and FINN emissions (a-b), FINN+GFEDpeat (c-d), FINNpeat (e-f) and FINNpeatSM (g-h). On each plot is the average AOD from fires for September and October.
