## Interactive comment on "Global inorganic nitrate production mechanisms: Comparison of a global model with nitrate isotope observations" by Becky Alexander et al.

## **Anonymous Referee #1**

Received and published: 2 June 2019

I recommend publication as is.

The authors present an interesting analysis of oxygen isotopes in nitrate as a constraint on global chemistry. They consider the main processes, the role of a variety of interesting more minor ones and conclude that N2O5 and OH driven processes are about equal contributors to the global average nitrate source.
