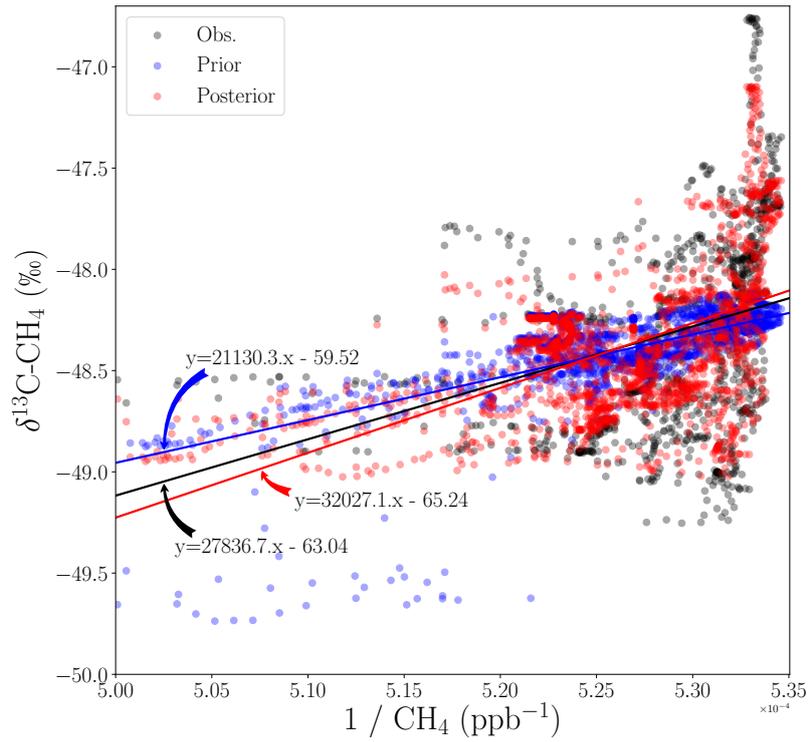

**Figure 1.** Average Sea Ice cover during summer 2014 (July–August). Data from NOAA/NSIDC passive microwave sea ice concentration climate data record (Comiso and Nishio, 2008).

**Figure 2.** Curtains plot of vertical wind speed (top panel) and simulated concentration from the top of the domain (bottom panel)

**Figure 3.** Vertical distribution of isotopic ratio as simulated by the model LMDZ averaged over the Arctic ocean for the year 2014.

**Figure 4.** Keeling plot for the observed (black) and simulated (blue/red before/after inversion)  $\delta^{13}\text{C}-\text{CH}_4$  during the campaign.
