Dear Editor and referees,

Many thanks for your comments that have helped improve this manuscript substanially.

While revising the manuscript, we realised that the isolation of the effects of aerosol changes in the "Best Estimate" experiment was probably biased due somehow to the experimental set-up (related to the initial condition issue). To address this issue, we have carried out a new experiment, which is now used throughout the revised manuscript (including Figures and texts). Note that, while this has resulted in differ-

Discussion paper

ent estimates of the impacts of aerosol changes in the best estimate case, it does not have any bearing on the major findings of this study on the comparison of the two different retrospective emission scenarios.

On behalf of all co-authors and sincerely,

Alcide Zhao
