Correspondence: Juan Pedro Montávez (montavez@um.es)

All the responses to referee comments that were uploaded as comments in the interactive discussion have been introduced in the new manuscript version. The discussions authors considered interesting for the article understanding have also been included. A changes control version (latexdiff) is included along with the new manuscript version. Thank you very much to both referees for their contribution to the significant improvement of the manuscript robustness and content quality with their suggestions and comments.
