

Response to editor and reviewers' suggestions:

We are asked to enhance the figure resolution. We didn't realize that "save as" button provided by office word had two options for generating PDF documents, one of which is to print as online version that contains lower resolution figures.

Now the updated PDF contains higher resolution figures better suited for print-out. In addition, we've uploaded all original figures in a zip file at "supplement" section. Every figure has 300 dpi and at least 8 cm for the shortest length, strictly following the ACP publication requirements. The only exception is Fig. 1, as it is adapted and modified from one of our previous papers, so the figure size is kept as the original one. The subplots in Fig. 4 and 5 are rearranged from vertical to horizontal layouts to ease the final typesetting. Blue and red lines in Fig. 9c have been switched in color to be consistent with the color definition in Fig. 9a and 9b to avoid confusions.

In addition, the "acknowledgement" section has been modified to acknowledge the three anonymous reviewers and Dr. Toshi Masui's insightful comments, which make this presentation better and clearer to read. We also include funding acknowledgement for two co-authors in this section. "Author contribution" section is also modified slightly to reflect Dr. Munchak's effort on polishing the final English writings.
