Very nice work, For a more complete understanding of aerosol types I would suggest you make mention of atmospheric microplastics including their sizes. The field is quite new however data is expanding and it could well play an important part in cloud formation. I suggest Allen et al. 2020 <https://journals.plos.org/plosone/article?id=10.1371/journal.pone.0232746> and keep an eye out for Brahney et al (currently under embargo) as the numbers could be very useful to you. Best of luck.
