Received and published: 14 May 2020

We thank the editor for the nice comments.

Comment: Could you explain how NH₃ was introduced into the chamber?

Reply: The NH₃ is present as a background gas in our chamber, and we didn't specifically add it to the chamber. We will clarify this point in the revised manuscript.

Comment: Also I'd suggest showing the temporal evolution of NO_x and SO₂ in the supplement.

Reply: We have plotted the time series of NO_x and SO₂ shown in the attached figure. We will add them in the supplement.
