Interactive comment on "The positive radiative forcing by the substantial SO₂ emission reductions is counteracted by decreased BC concentrations in China over the recent decade" by Mingxu Liu and Hitoshi Matsui

Anonymous Referee #2

Received and published: 22 September 2020

The manuscript is very well written, both in terms of language usage and in terms of clarity of wordings, it makes a very easy read. However, there are major issues with the presentation of the results, their mis-presentation in some cases -see annotated pdf. I strongly recommend to the authors to consider these comments and improve the presentation of their results in a more scientific manner.
