6 **Figure S1** Comparison of the simulated average concentrations of NO₂ in NCP (the percentage numbers
7 indicate the normalized mean biases in hypothesis and actual simulations respectively for Period 2. Blue
8 dots: observations; Black line: simulations using adjusted emission with no consideration of shutdown
9 influences; Red line: simulations using adjusted emission with consideration of shutdown influences;
10 unit: $\mu\text{g m}^{-3}$)

11

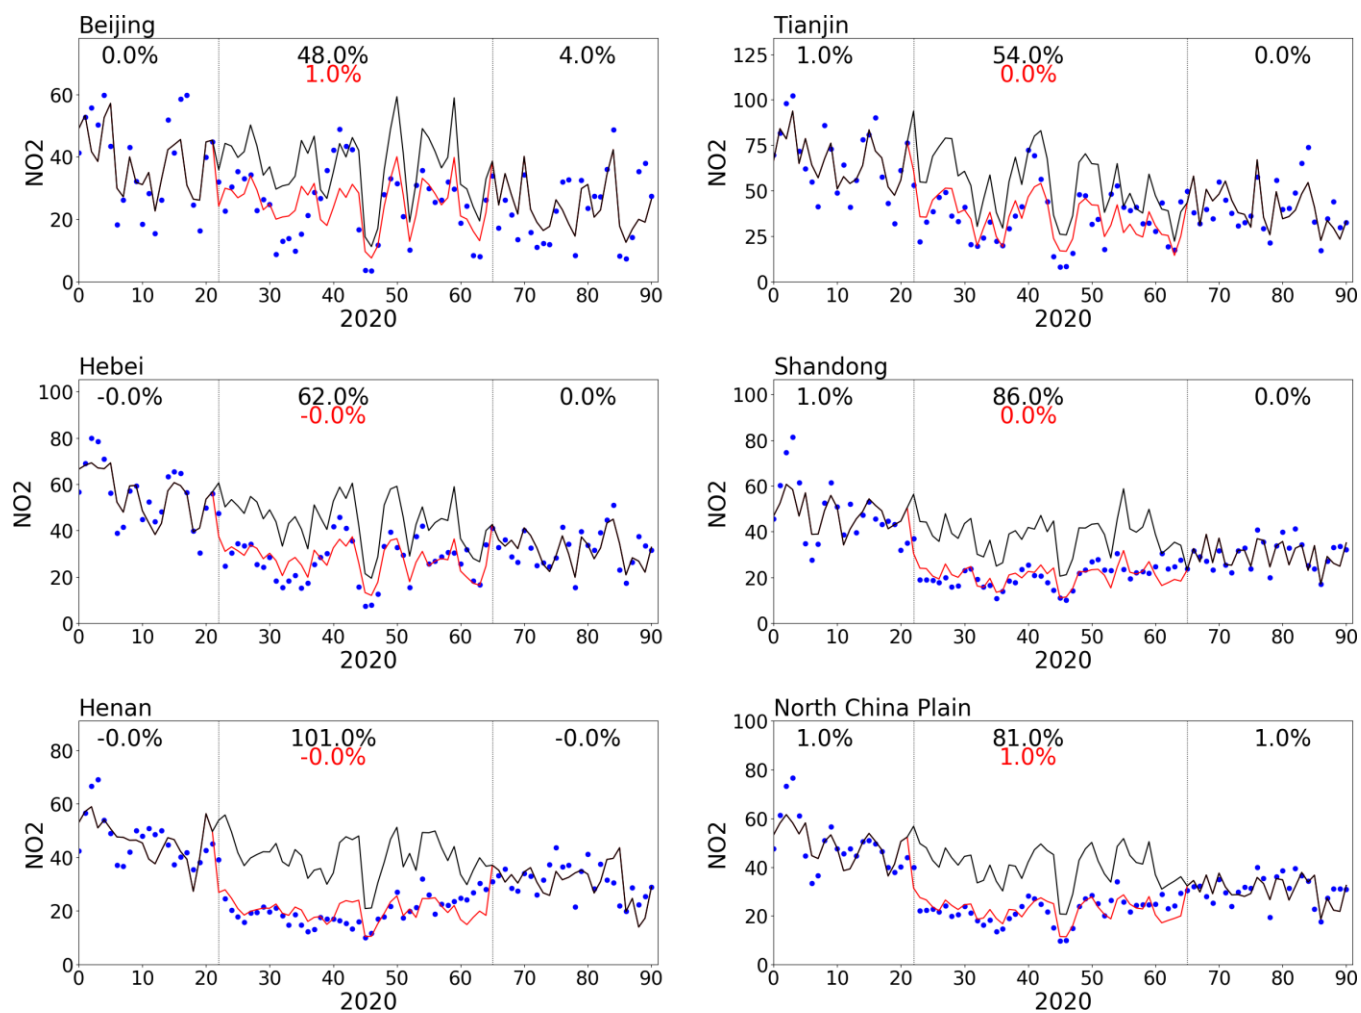

Figure S2 Same as Figure S1 but in 2020

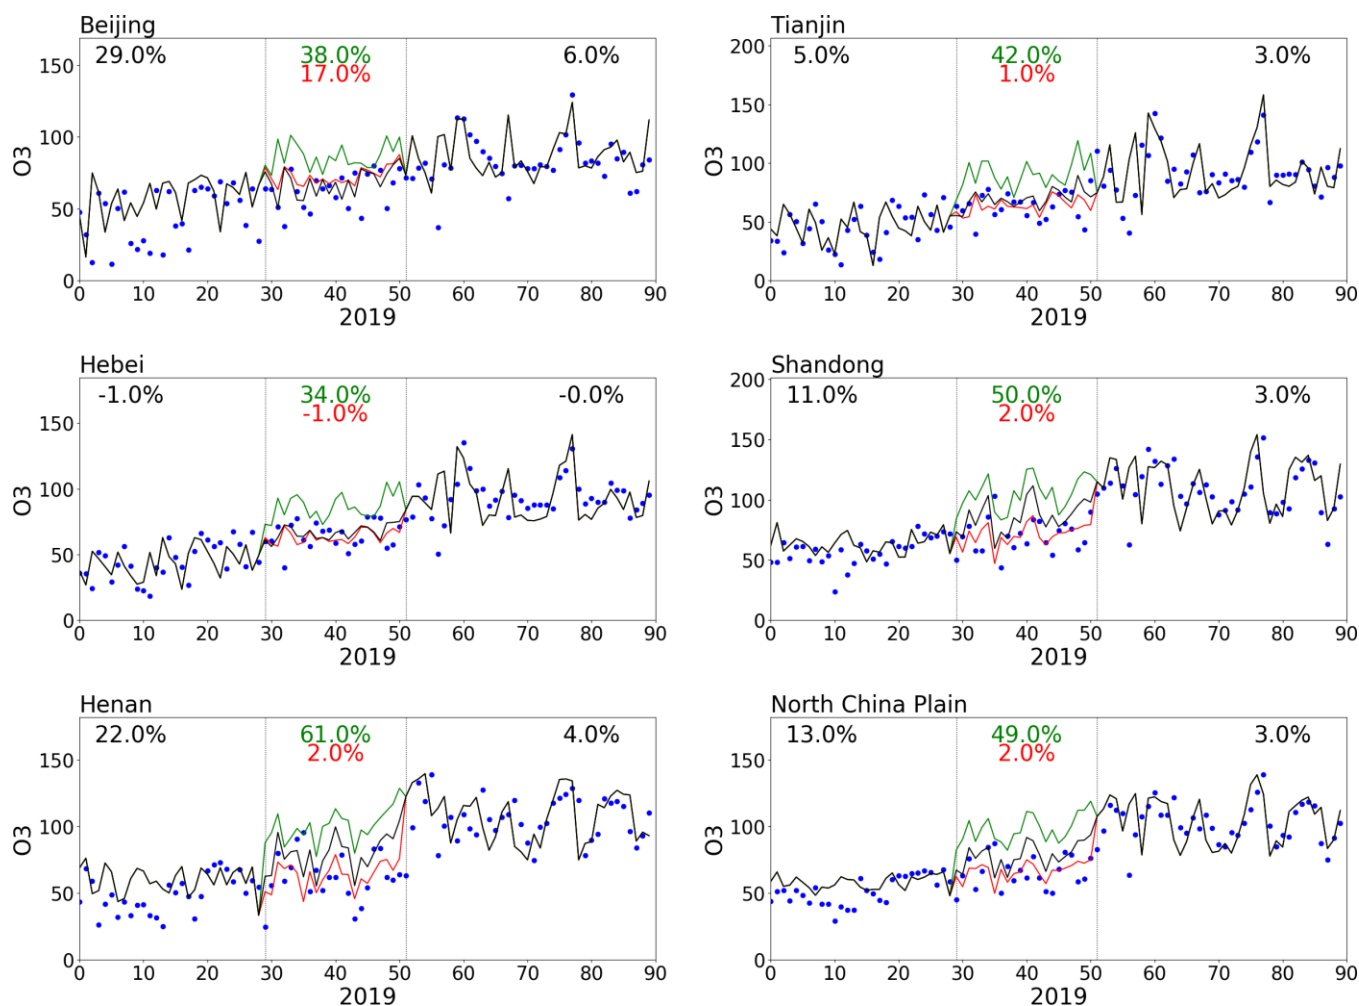

Figure S3 Comparison of the simulated average concentrations of O₃ in NCP (the percentage numbers indicate the normalized mean biases in hypothesis and actual simulations respectively for Period 2. Blue dots: observations; Black line: simulations using adjusted emission with no consideration of shutdown influences; Red line: simulations using adjusted emission with consideration of shutdown influences; Green line: simulations using adjusted emission with consideration of shut-down influences but without VOC; unit: $\mu\text{g m}^{-3}$)

23

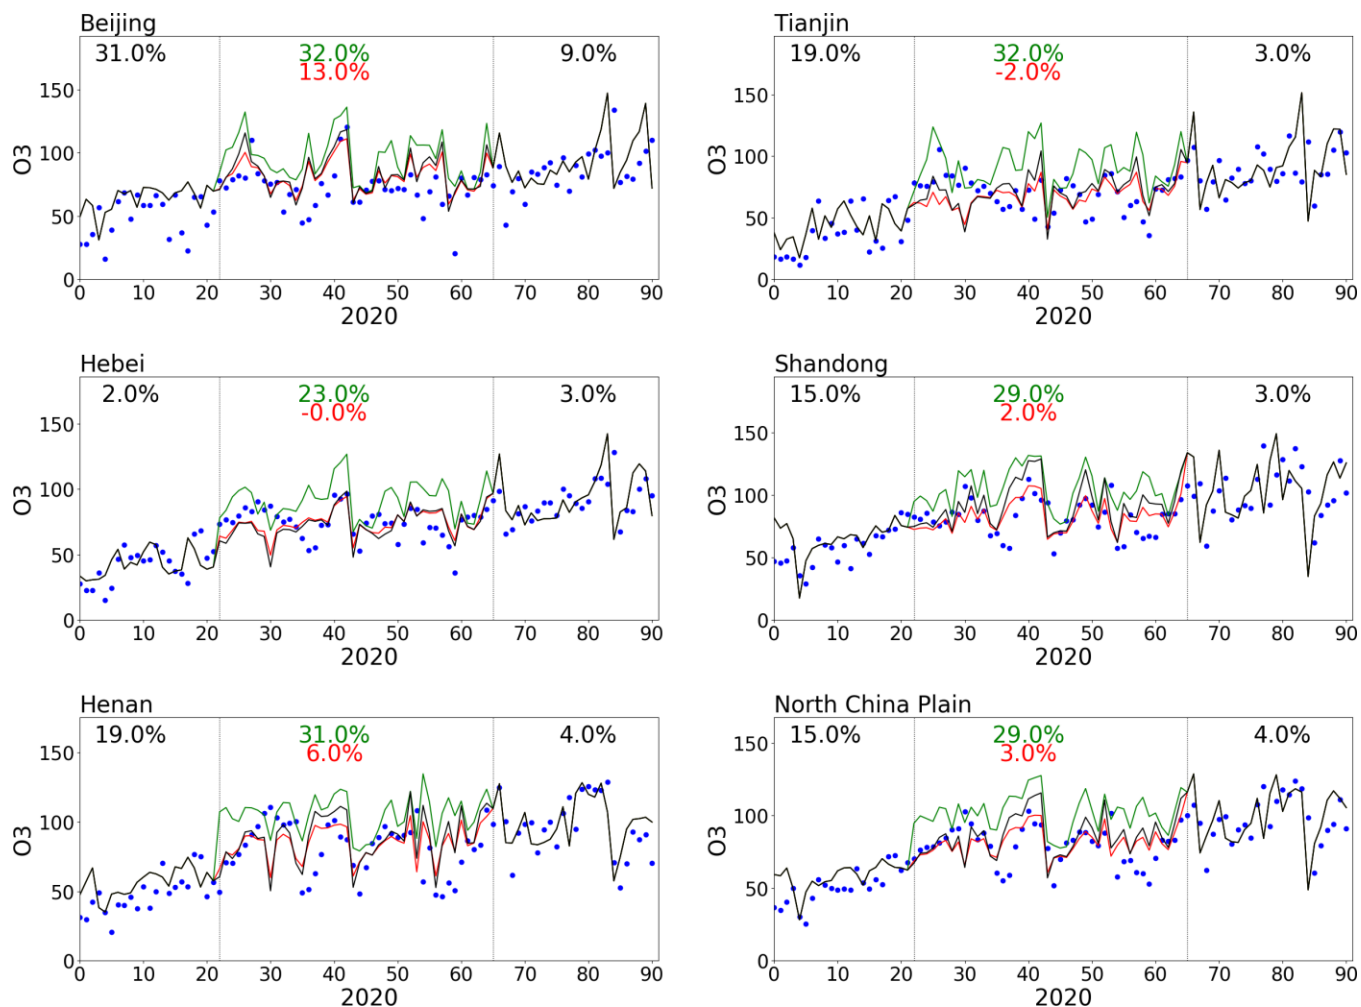

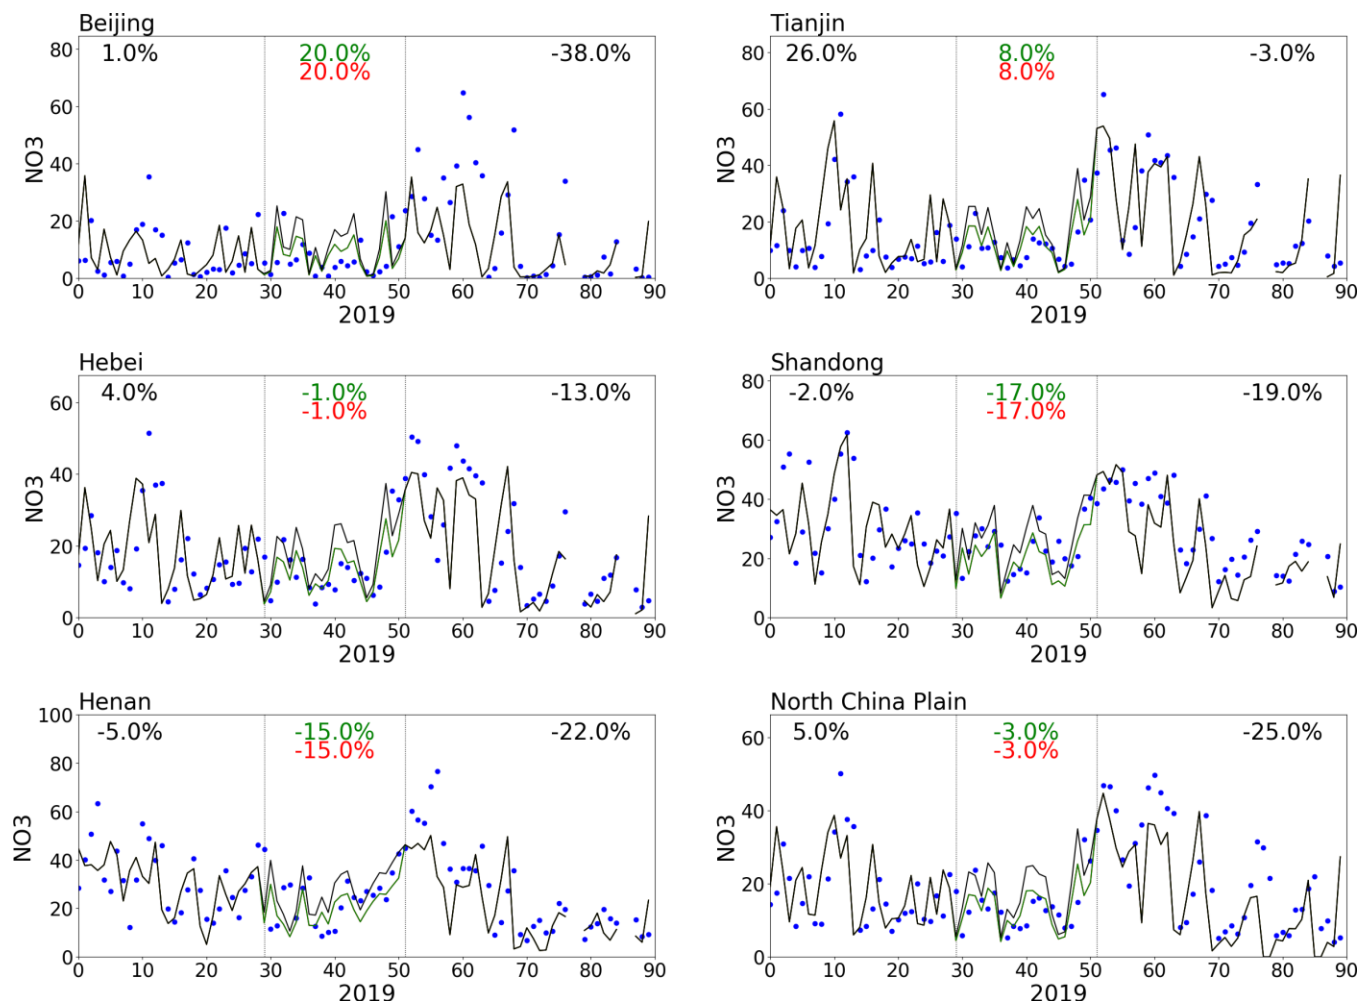

Figure S4 Same as Figure S3 but in 2020

28

29 **Figure S5** Comparison of the simulated average concentrations of NO_3^- in NCP (the percentage numbers
 30 indicate the normalized mean biases in hypothesis and actual simulations respectively for Period 2. Blue
 31 dots: observations; Black line: simulations using adjusted emission with no consideration of shutdown
 32 influences; Red line: simulations using adjusted emission with consideration of shutdown influences;
 33 Green line: simulations using adjusted emission with consideration of shut-down influences but without
 34 NH_3 ; unit: $\mu\text{g m}^{-3}$)

35

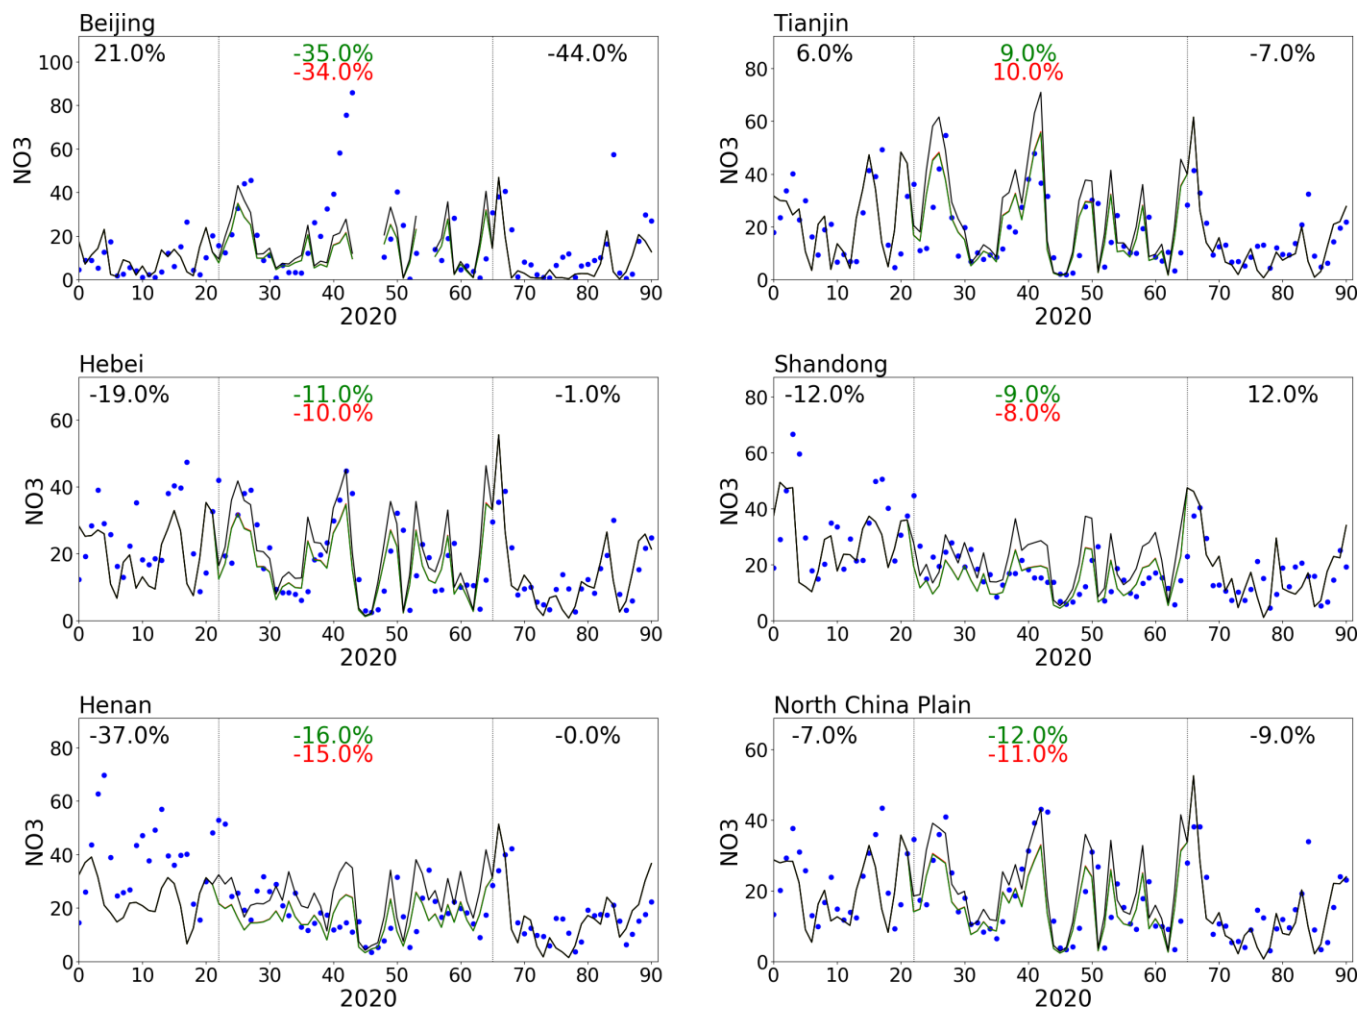

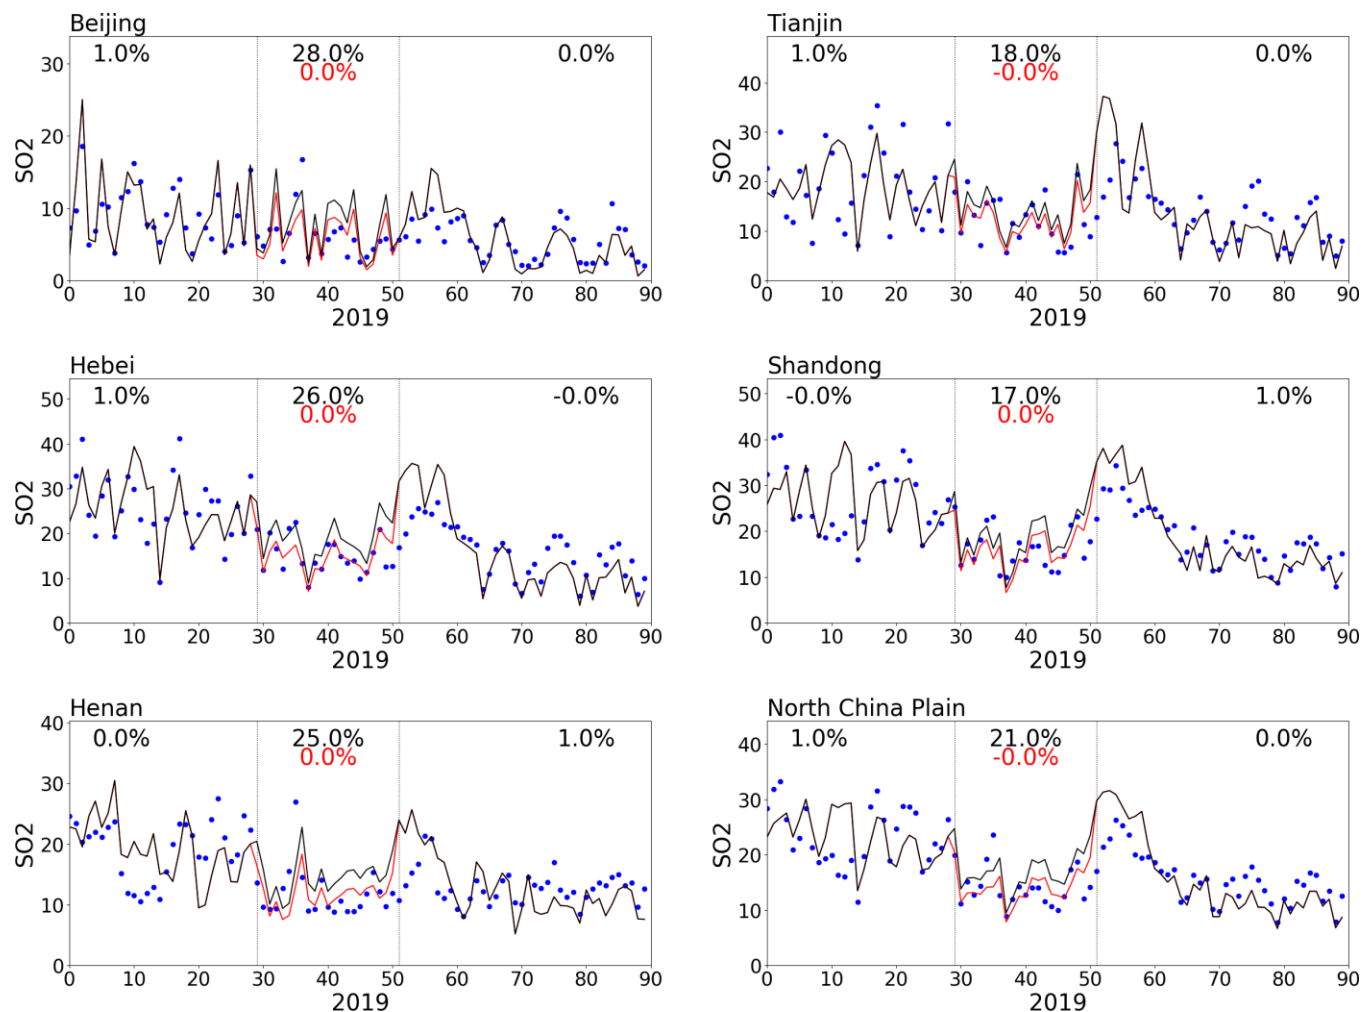

Figure S6 Same as Figure S5 but in 2020

41

42 **Figure S7** Comparison of the simulated average concentrations of SO₂ in NCP (the percentage numbers
 43 indicate the normalized mean biases in hypothesis and actual simulations respectively for Period 2. Blue
 44 dots: observations; Black line: simulations using adjusted emission with no consideration of shutdown
 45 influences; Red line: simulations using adjusted emission with consideration of shutdown influences;
 46 unit: $\mu\text{g m}^{-3}$)

47

48

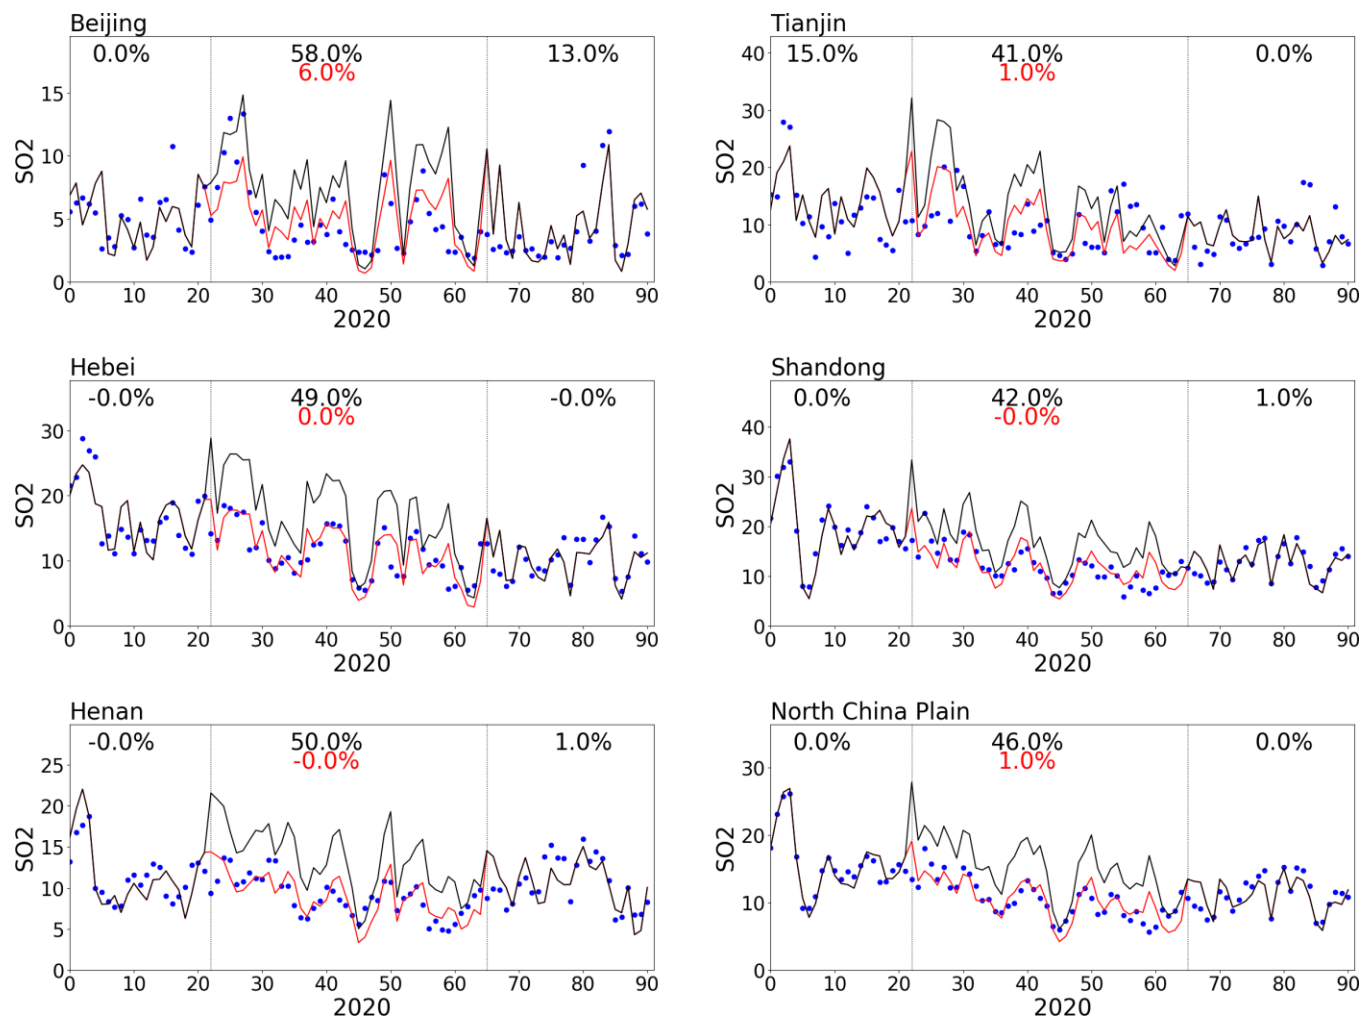

Figure S8 Same as Figure S7 but in 2020

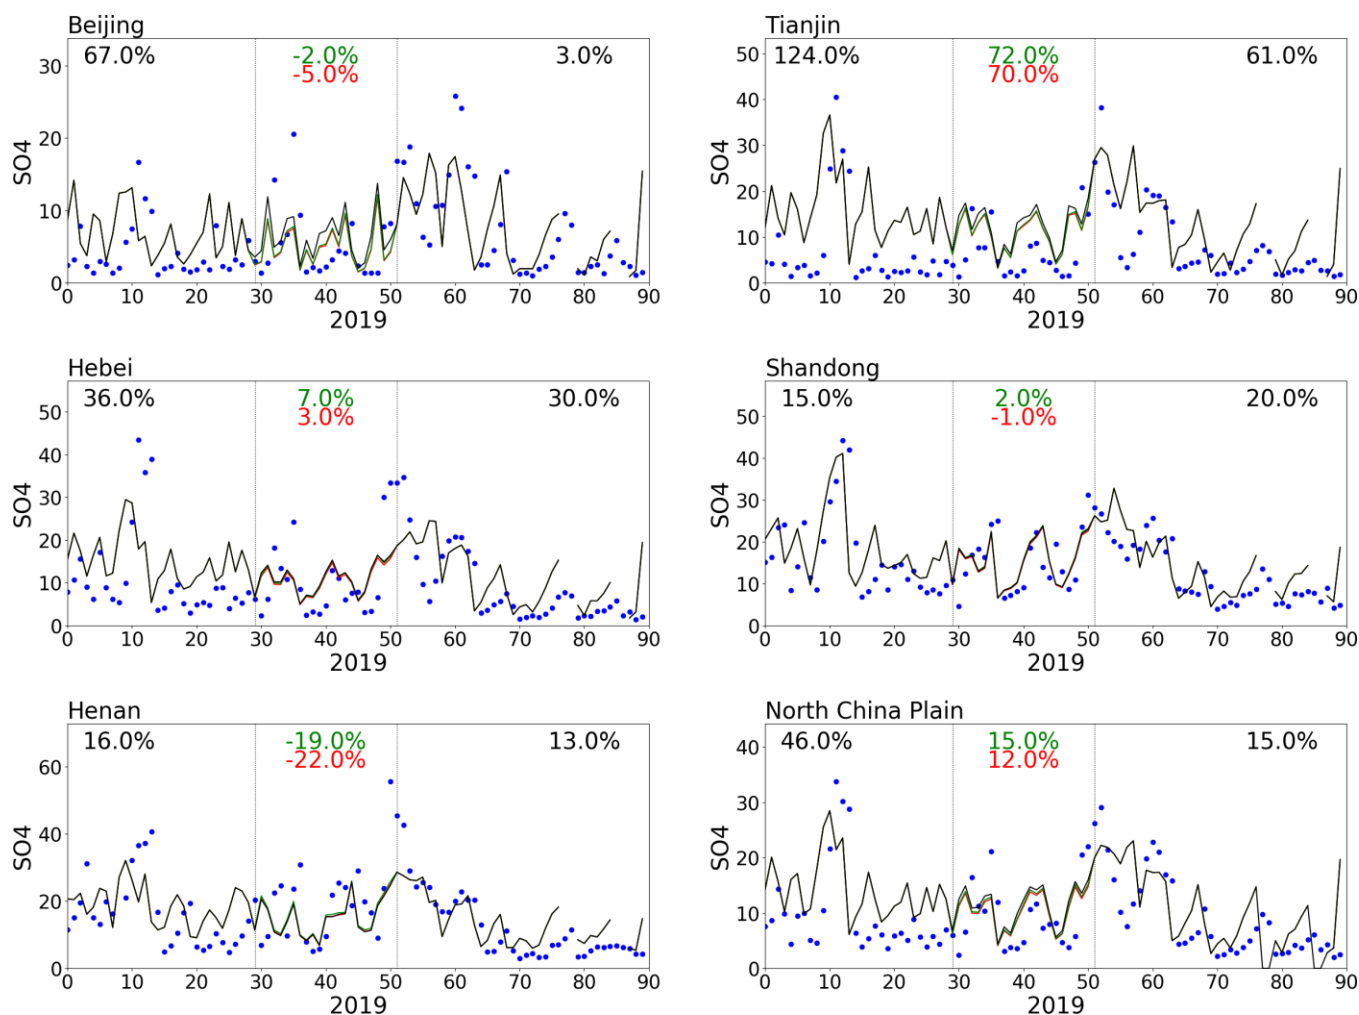

Figure S9 Comparison of the simulated average concentrations of SO_4^{2-} in NCP (the percentage numbers indicate the normalized mean biases in hypothesis and actual simulations respectively for Period 2. Blue dots: observations; Black line: simulations using adjusted emission with no consideration of shutdown influences; Red line: simulations using adjusted emission with consideration of shutdown influences; Green line: simulations using adjusted emission with consideration of shut-down influences but without SO_2 ; unit: $\mu\text{g m}^{-3}$)

59

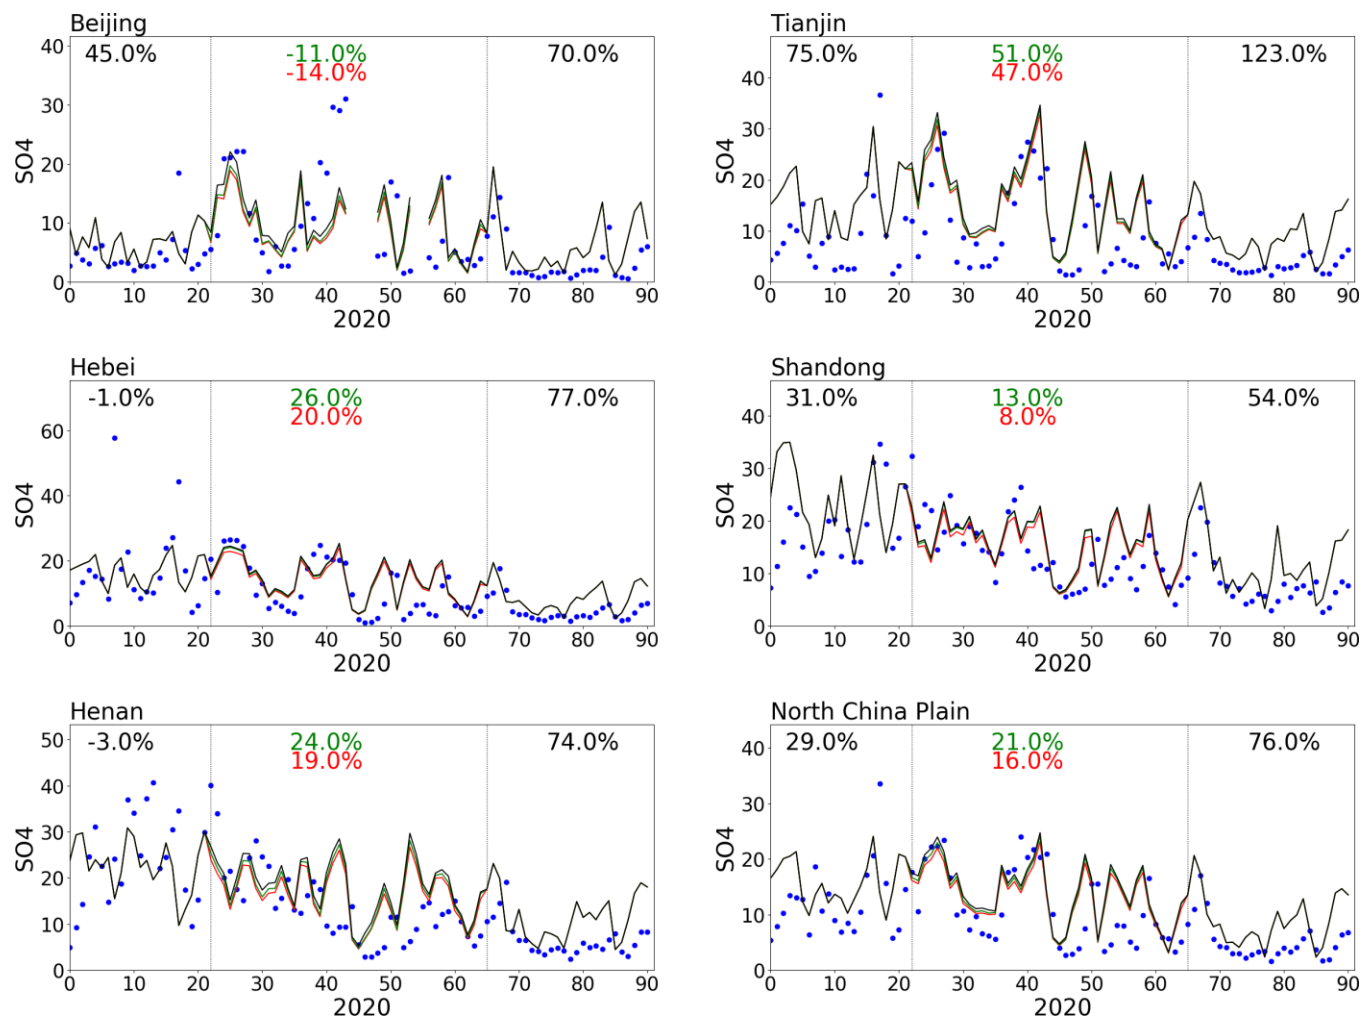

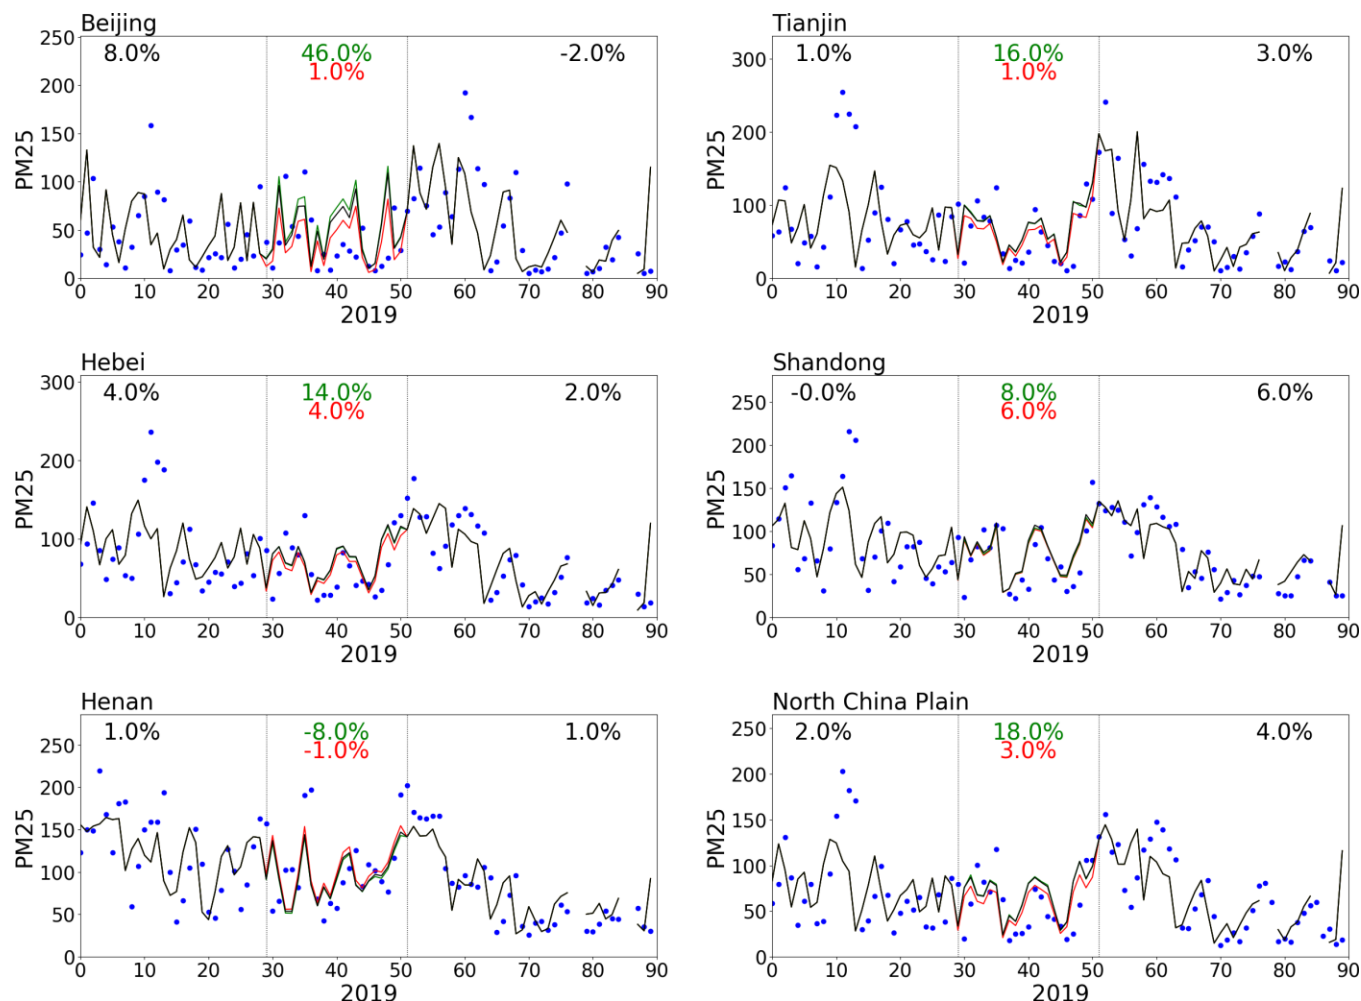

Figure S10 Same as Figure S9 but in 2020

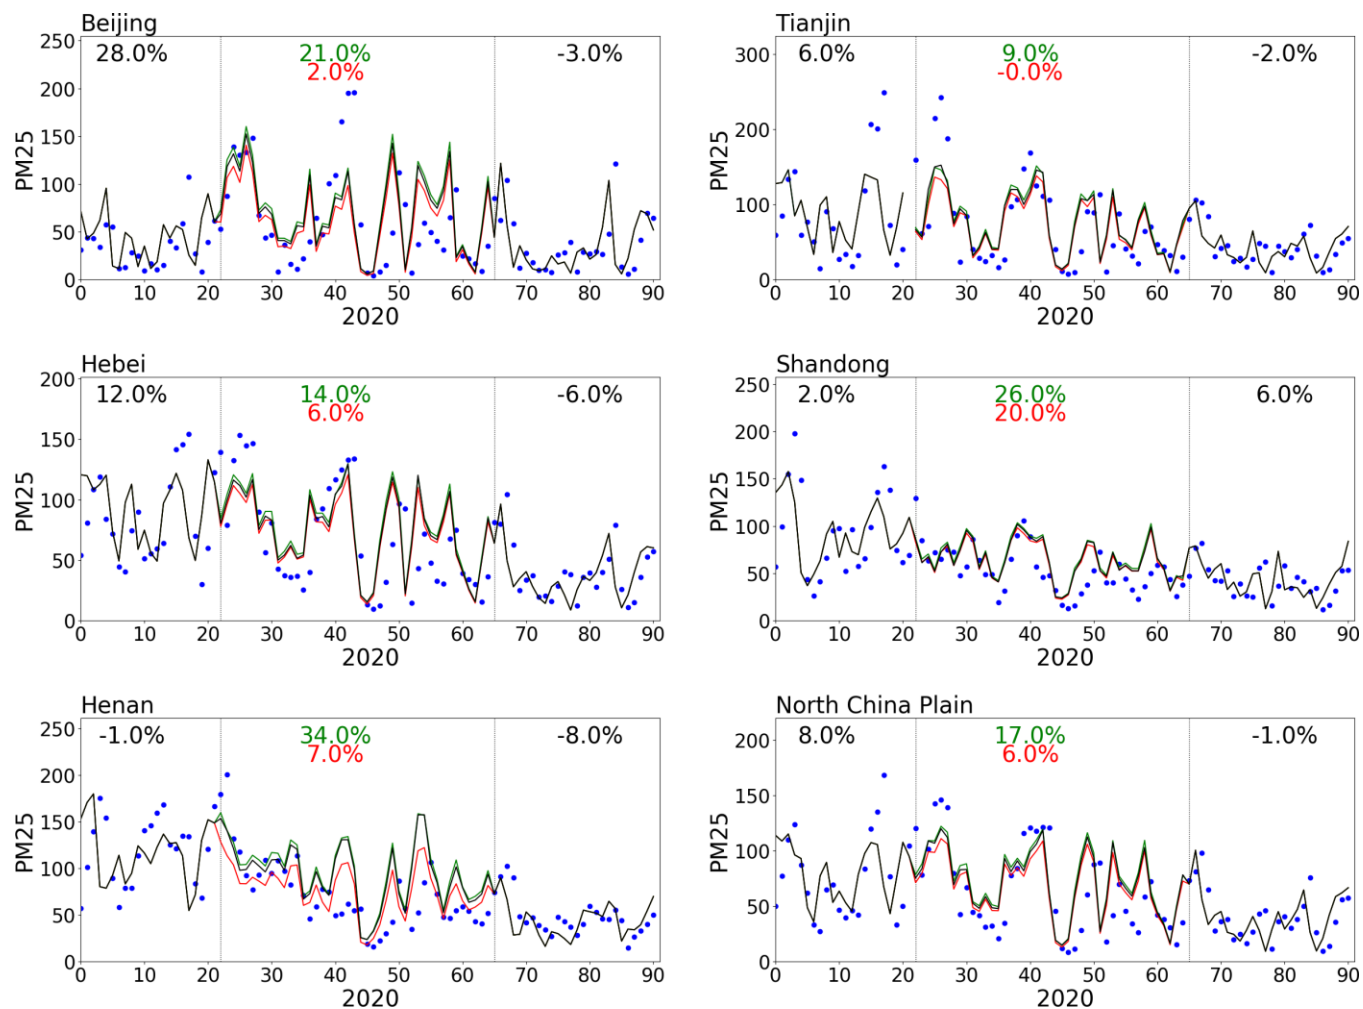

64

65

Figure S11 Comparison of the simulated average concentrations of PM_{2.5} in NCP (the percentage numbers indicate the normalized mean biases in hypothesis and actual simulations respectively for Period 2. Blue dots: observations; Black line: simulations using adjusted emission with no consideration of shutdown influences; Red line: simulations using adjusted emission with consideration of shutdown influences; Green line: simulations using adjusted emission with consideration of shut-down influences but without primary PM_{2.5}; unit: µg m⁻³)
