

Interactive comment on “The response of mesospheric H₂O and CO to solar irradiance variability in the models and observations” by Arseniy Karagodin-Doyennel et al.

Anonymous Referee #1

Received and published: 22 September 2020

This paper is devoted to the connection of water vapor and CO concentration and solar irradiance in the mesosphere in the selected model. The results are presented well, clearly and all new findings the authors try to explain in a good manner. I am not a native speaker but the English in the paper is good. I have not any difficulties with the reading of the paper. and thus according to my opinion this paper can be accepted as is
