We have added the following in the main text (end of page 3): “The coverage of the evaluation was previously limited to the reactions of $\leq C_3$ organics, selected larger species (n-butane, isoprene, 2-methyl-but-3-en-2-ol and alpha-pinene) and some related oxygenated products (Atkinson et al., 2006). This has been substantially increased to include all C_4 alkanes and alkenes, benzene and toluene, monoterpenes and sesquiterpenes, and related oxygenated products. This volume therefore presents evaluations for 97 new reactions, and updates for 25 reactions, of organic species with

C1

four, or more, carbon atoms.”
