

We would like to thank Editor for addressing small comments which adds clarity to this paper

There are a few minor point I ask you to address prior o publication of your revised manuscript. I am referring to line numbers of version 2 of the manuscript.

-- Lines 55/56: you re-ordered the sentences that reviewer 1 identified as confusing. However, this does not make the sentence any clearer. Please try to reword - maybe the term 'aersosol description' needs further explanation

Line 55-56 is now referring models athropogeni aerosol desrcitpions

-- Line 239: ($\pm 0.25K$) likely should be ($\pm 0.25K$) - skipping the minus before \pm ?

-Typo fixed

-- Line 108: indices cld do not match with indices clr and cld in the response to reviewer 2 - please doublecheck if all indices are correct here

-Typo fixed

-- Line 323: 'these differs' should be 'this differs' or 'these differ'. It is unclear what 'these' refers to - please clarify

-Line 323 replace these by model-to-model spread

-- Line 400: the added statement on the bcx10 experiment does not fully answer the reviewer's question - please extend

-This is extended “where BC absorbs in coming SW-radiations leading warming of the upper atmosphere and increase low level clouds. Future more, over oceans there is more moisture available for low level cloud formations leading cooling of the surface”
