

Response to the Editor — Article ACP-2021-708

Editor Comment 1

For clarity in line 556, I suggest adopting the reviewer's statement that the annual decrease rates for VOCs and NO_x obtained from ambient measurements correspond to a reduction by a factor of 10 for VOCs and a factor of 2.2 for NO_x. Explicitly stating these factors makes it easier for the reader to compare them to the factors estimated from the emissions inventory.

Response:

This change has been made as requested on line 559 of the revised manuscript.
