Response to reviewer #2 on

the manuscript "Ozone pollution during the COVID-19 lockdown in the spring 2020 over Europe analysed from satellite observations, in situ measurements and models" by Cuesta et al.

Thank you very much for your careful reviews that have improved the quality of the manuscript. We would like to thank the reviewers for this final suggestion as well.

The authors have done a good job, and the revised version addresses nearly all comments of the reviewers. I think the revised version now reads well and is suitable for publication. I did notice a glitch in Table 6: Seems to me surface ozone decreased from 2019 to 2020, so there should be minus sign in front of the ppbs in the 2nd row of the table. It is there for the percent changes.

Agreed and corrected. Yes, the missing minus signs are indeed a typing error. We have added the minus to the revised submission of the manuscript and supplement.
