

Aug/18/2022

Dear Editor

Please find attached the response to the reviewers for the manuscript entitled “Circular Polarization in Atmospheric Aerosols” ( acp-2022-55) by myself and Kirk Knobelspiesse.

All questions, comments and corrections have been addressed and modifications added to the new manuscript. This version of the manuscript has changed (for the better we think) but not in a major way and the main points and conclusion remain the same.

We would like to thank the three reviewers as all had interesting comments (even the reviewer who recommended major changes and spotted an error in the computations).

Also, we would like to apologize for the delay in submitting the response. Many points required some bibliography research and careful writing, this resulted in a total of 28 pages to answer the reviewers (to compare the actual manuscript is 22 pages without references). Also, one of went on vacation and was a lead organizer of an international meeting, so everything got delayed. We thank the editorial office for being flexible with the deadline.

As I am submitting this answer, I am going on vacation in two weeks so, I will be able to address any inquiry on my return in the first week of September.

Sincerely

Santiago Gassó
