

**Final decision-acp-2022-608**

Based on the detailed comments of the two experts in the field, and after my consideration, the manuscript is of adequate atmospheric interest to merit publication in *Atmospheric Chemistry and Physics*.

The authors have thoroughly responded all the questions/comments raised by the reviewers, and modified the manuscript according to the suggestions. Besides, the revised manuscript has been checked again by Pierre Amato, who now supports the publication.

The manuscript can be accepted for publication in ACP.

**Additional comments:**

Can you please add the aliquots of the sample removed for analysis where necessary?

See Referee 1 comment:

*"These experiments were conducted in 5 mL volumes based on Methods section 2.2 (pg 6, ln 176). Multiple points in the manuscript (e.g., pg 6, ln 179; pg 7, ln 196; pg 8, ln 226) mentioned aliquots of the sample being removed for analysis....."*

Sincerely,

Irena Grgić
