

## **Final decision-acp-2023-51**

Based on the detailed comments of the two experts in the field, and after my consideration, the manuscript is of satisfactory atmospheric interest to merit publication as a Measurement report in *Atmospheric Chemistry and Physics*.

The authors have correctly addressed all the questions/comments raised by the reviewers, and me, and modified the manuscript according to the suggestions. Besides, the revised manuscript has been checked again by the Anonymous referee 2, who also supports the publication.

The manuscript can be accepted for publication in ACP.

### **Additional comments-acp-2023-51:**

Please, correct the references according to instructions:

<https://www.atmospheric-chemistry-and-physics.net/submission.html#references>

Sections 4 & 5 should be merged into one as: *“Conclusions and atmospheric implications”*. This is also a suggestion of the referee:

*“I noticed that a new section entitled “Implications” was incorporated into the revised manuscript. However, it seems odd to me that this section was placed after the “Conclusions” section. Based on the content of the section “Implications”, I would suggest to authors to incorporate the new content within the Conclusions and rename the last section “Conclusions and Outlook” or similar»*

Sincerely,

Irena Grgić
